NINTH CENSUS—VOLUME III.

THE STATISTICS

OF

THE WEALTH AND INDUSTRY

OF

THE UNITED STATES,

EMBRACING

THE TABLES OF WEALTH, TAXATION, AND PUBLIC INDEBTEDNESS;
OF AGRICULTURE; MANUFACTURES; MINING;
AND THE FISHERIES.

WITH WHICH ARE REPRODUCED, FROM THE VOLUME ON POPULATION,

THE

MAJOR TABLES OF OCCUPATIONS.

COMPILED,

FROM THE ORIGINAL RETURNS OF THE NINTH CENSUS,

(JUNE 1, 1870,)

UNDER

THE DIRECTION OF THE SECRETARY OF THE INTERIOR,

BY

FRANCIS A. WALKER,
SUPERINTENDENT OF CENSUS.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1872.

MAPS CONTAINED IN THIS VOLUME.

	Page.

STATISTICS

OF

WEALTH, TAXATION, AND PUBLIC INDEBTEDNESS.

REMARKS

ON THE

STATISTICS OF WEALTH AND PUBLIC INDEBTEDNESS.

VALUATION.

The schedule commonly known as the Social Statistics Schedule, annexed to the act of 1850, proposes ten distinct subjects of inquiry, viz: Valuation; Taxation; Churches; Schools; Libraries; Newspapers; Wages; Crops; Pauperism; and Crime. Of these ten heads, one, viz, Crops, was, as explained in the remarks which preface the Population volume of this census, stricken out of the schedule, as its proposed scope is more fully covered by the investigations of another office, viz, the Department of Agriculture. The place which it formerly occupied upon the schedule was devoted to an inquiry into State, county, and municipal Indebtedness.

The results of the inquiries in respect to churches, libraries, schools, newspapers, pauperism, and crime, as bearing on the moral, social, and intellectual condition of the people, will be found in connection with the Statistics of Population. The Tables of Valuation, Taxation, and Indebtedness, constituting a part of the Industrial Statistics of the census, have been grouped with the Statistics of Production, and will be found in the pages immediately following.

That part of the Social Statistics schedule of 1850 which is devoted to the subject of Valuation has always been understood to require—

First. A positive statement of the value of Real Property as *assessed* for purposes of State or local taxation.

Second. A positive statement of the value of Personal Property as *assessed* for purposes of State or local taxation.

Third. An *estimate*, by the officer making the return, of the True Value of both species of property combined. The phraseology of the schedule in this matter is most unfortunate, but it has always been understood (interpreted is hardly the word) to mean what is given above.

Inasmuch as the laws of some States exempt large amounts of personal property from taxation, while in others large classes of real property are so exempted; inasmuch, moreover, as the customs of assessment vary greatly in different States, and oftentimes in the several counties of the same State—in some the taxable value of the property not exempted by law being fixed at no more than a third of its recognized selling-price; in others, at fifty, sixty, seventy, eighty, or ninety per cent.—it will be seen that the result of the first two inquiries is not to obtain the wealth of the several States and Territories, but to present merely the actual basis of State or local taxation: the amount, namely, in each State, county, or town, upon which a tax of five, ten, or fifteen dollars in the thousand might be levied. The utter want of uniformity in this matter of assessment for purposes of taxation cannot be too strongly insisted on. Without a knowledge of the laws of each community in respect to exemptions, as well as a knowledge of the customs of assessment in each, assessed values must always bear a very uncertain relation to real wealth.

That, then, which the first two inquiries under this head do not attempt to obtain, namely, the Real Wealth of the several States and Territories, it is sought to reach by means of estimates to be made by the officer immediately charged with the collection of the Social Statistics of the district or subdivision; and the results of this effort will be found in the proper column of the tables following.

As estimates on no subject can have any authority excepting such as is derived from confidence in the persons making them, or, if such estimates are put forth impersonally, then from confidence in the methods pursued, it is but right that it should be stated by what class of officers this part of the census work has been performed, and under what instructions from the central office they have acted. At the best, these figures represent but the opinion of one man, or of a body of men, in each State, acting under advice in the collection of material and in the calculation of the several elements of the public wealth.

From the following States and judicial districts the return of Social Statistics was made by a single deputy marshal specially commissioned for that duty, viz: California, Connecticut, Delaware, Indiana, Iowa, Kansas, Ken-

tucky, Louisiana, Massachusetts, Michigan, Mississippi, Nebraska, Nevada, New Jersey, Eastern New York, Southern New York, North Carolina, Ohio, Oregon, Western Pennsylvania, South Carolina, Texas, Vermont, Wisconsin, Wyoming, and District of Columbia.

From each of the following States and judicial districts the returns of the Social Statistics were made by two or more deputy marshals specially commissioned for the service, viz: Alabama, Illinois, Missouri, Northern New York, and Eastern Pennsylvania.

In the following States and judicial districts the collection of the Social Statistics was, by the United States marshal, in his discretion, intrusted chiefly to the regular assistant marshals, each in his own subdivision, viz: Arkansas, Florida, Georgia, Maine, Maryland, Minnesota, New Hampshire, Rhode Island, Virginia, West Virginia, Arizona, Colorado, Dakota, Idaho, Montana, New Mexico, Utah, and Washington.

Where the duty of making these estimates of the true value of all species of property was charged upon assistant marshals, the merit of such estimates will, of course, depend upon the character of the marshal's general line of appointments. Where assistant marshals were selected from among the best citizens of the district, their estimates, based on a more intimate local knowledge than was otherwise attainable, and with the advantage of a thorough personal canvass of the immediate region concerned, may be assumed to be reasonably just and close to all the facts and conditions of the case. The advantage of committing this duty to one or two officers in a State was found in the considerations—first, that this plan secured a greater uniformity of treatment; second, that, with the smaller number of persons engaged, it was practicable for the Census Office to confer more frequently and minutely with them in respect to difficulties encountered, and to communicate information or suggestions bearing on the subject; third, that it was possible by this method to secure officers of a distinctly higher grade for the performance of this duty.

The latter consideration was of prime importance for the purposes of a true valuation of the realized wealth of the country. Some of the gentlemen who consented to act in this capacity are of national reputation, while nearly all the appointees of this class brought to the work special qualifications and exceptional opportunities for the investigation.

The two points particularly dwelt upon in instructions from the Census Office in this matter of valuation were, first, the undervaluation of real estate in assessments for taxation; second, the large classes of personal property which,

(*a*) By State or Federal laws are exempt from taxation; or,

(*b*) By the habits of assessment are disregarded, (notably furniture, apparel, and equipage, and small amounts of money in hand or in bank;) or,

(*c*) By evasion or fraud escape assessment.

The investigations under the first head, as they have become known to the Census Office, have been searching and comprehensive. It is a great mistake to suppose that a uniform per cent. can be taken by which to advance the assessed values of real property throughout the country, or even throughout any one State, to reach the true selling price. Not only are the variations to be calculated very great in every State, even after the nominal equalization which, in a few States, is effected by State boards constituted for the purpose, but the variations as between States are such as to deprive random statements as to the amount of undervaluation of all authority whatever. There are States in which the assessed value of the whole body of real estate does not fall short of its selling price in a favorable market by more than ten per cent. In others the true value exceeds the assessed value by two hundred per cent., and even more; while between these extremes States are ranged without any perceptible order, certainly without any means of determining *a priori* their place in the scale. Hence, to say generally, as is so often done in discussions of the realized wealth of the country, "Add 30 per cent. for undervaluation," is the merest trifling. It is possible, however, so to conduct investigations in regard to each important section, by turn, as to reach results of real value, even though they take no more authoritative form than that of estimates. But that this should be so, it is necessary that they should be the estimates of judicious and well-informed men, known to have canvassed the whole field, with access to all official data existing, and acting in constant conference with each other and with a central office.

In a few States, notably several of the former slave States, both property and industry are in such a condition of uncertainty that it has only been possible to deal with the question roughly and approximately; but speaking generally for the majority of the States, and for the vast majority of the property of the country, the additions to be made to assessed values, on account of the undervaluation of real estate, have been calculated with great nicety by competent investigators.

No such accurate methods could, of course, be applied to the determination of the question how much should be added to the assessed valuation of the country on account of the exemption or escape of personal property from

taxation. The result reached must, at best, be characterized rather as an *impression* than an *opinion;* but so long as this work was to be done at all, it was highly desirable that the impression should come from a study of the subject, and not from guessing at elements which had never been seriously considered.

One remark more will be appropriate before submitting these tables to criticism. No attempt has been made to eliminate that portion of the personal property of the country which is based on the value of real estate. To that extent, therefore, there is a duplication of wealth. The reasons why it was not deemed expedient to undertake the work of reducing the aggregate valuation of real and personal property by the amount of the latter which merely represents the former, were as follows:

First. This duplication follows the general rule of State and municipal taxation. In nearly all the States of the Union land and buildings are taxed to their full (assumed) value, without deduction on account of mortgages, while the mortgages are also taxed at their full value. To obtain the aggregate value of both species of property, this duplication being admitted, is, therefore, to obtain the basis of possible taxation on prevailing methods of taxation, better than by excluding such duplicated values.

Second. This personal property representing real property is not always, perhaps not generally, owned in the immediate community where the real property is situated. Its exclusion, therefore, while it would more accurately present the realized wealth of the country as a whole, would lead to the grossest misrepresentation as between sections and States. Hundreds of millions are owned in the East in the form of mortgages on the real estate of the West. If these gigantic amounts are to be excluded from such tables as the following, they must be excluded *as personal property* from the valuations of the Eastern States. But to do so would be in the highest degree unjust. The wealth of these States consists in the value of their own real estate, their manufacturing, commercial, and banking capital, their furniture, apparel, and equipage, *plus* the claims they have upon the lands, buildings, and railways of the newer States.

Third. Even were it desirable, in view of the two considerations here presented, to eliminate the element of duplicated valuations, it will appear, on reflection, clear that the difficulties in the way of anything approaching an accurate determination of the amount to be excluded would be almost insuperable.

On all these accounts it was believed that it would be far more satisfactory to aggregate the totals of real and of personal property as separately obtained, without any inquiry how far the value of one merely represents the value of the other.

PUBLIC INDEBTEDNESS.

It is, of course, impossible to introduce into such statements of public indebtedness as are contained in the last division of the following tables anything like uniformity in the treatment of contingent liabilities.

In some States the treasury is contingently liable, in an amount far exceeding the proper debt of the State, for the payment (in some cases of the principal and in others of the interest) of bonds issued by, or in aid of, railroad and other companies; the security given for the payment of such obligations at maturity, by the companies themselves, varying in quality from the highest to the lowest. It is hardly necessary to say that the same difficulty attends the statement of the debt of the United States, by reason of the aid extended by the Government in the construction of certain railroads.

A second obstacle to uniformity in such statements as the following is found in the fact that in many States the bonds of the State are held in trust, in large amounts, by officers representing various special interests of the State itself. For example, the securities of the educational funds in one-half the States consist largely, if not principally, of State bonds. To determine in which of these States, at any future time, or under all reasonable contingencies, provision would be made for the payment of the interest or principal, and in which of the States, in times of financial embarrassment or under possible political conditions, the interests of education would be left to suffer, would be invidious even if it were practicable, but will be seen at a glance to be wholly impracticable and hopeless.

In view of the difficulties thus briefly stated, (and others might be cited,) it has been thought best to express the debt of each State in the following tables at the amount recognized by the proper officers and authorities of the State as constituting its debt, and to accompany the statement by such explanations and such additional information as may be necessary to enable any person so disposed to work out the statement of indebtedness upon a uniform rule, either inclusive or exclusive of all contingent liabilities, (without reference to the quality of the security;) or, again, either inclusive or exclusive of all sums owing from the treasury to some department of the State itself. It is true that this plan may involve considerable differences in the treatment of the subject of State liability, due not so much to differences in the character of the security in the several cases, as to the somber or sanguine disposition of the officers immediately in charge, or to temporary embarrassments, or to the traditions of

an auditor's or a comptroller's office. But it is believed that any other plan would be liable to more of objection and of odium.

THE UNITED STATES.—The statement of funded debt is exclusive of bonds issued in aid of the several Pacific railroad companies to the amount of $64,457,320.

ALABAMA.—The statement of funded debt is exclusive of State indorsement of railroad bonds to the amount of $8,480,000, on which no default in payment of interest by the companies has occurred. The statement of unfunded debt includes $2,126,121 due to the educational fund, and $669,086 of "surplus revenue," interest on which, by law, must be paid from the treasury to the educational fund.

ARKANSAS.—The statement of funded debt is exclusive of bonds to the amount of $2,150,000 issued in aid of railroad companies, on which no default in payment of interest by the companies has occurred; and of bonds to the amount of $2,391,072 issued to banks.

CALIFORNIA.—The statement of funded debt is inclusive of bonds to the amount of $1,191,000 held by the school and university funds.

CONNECTICUT.—The treasurer reports about $700,000 in the treasury applicable to the reduction of the funded debt. The statement of funded debt is made without reference to such assets.

DELAWARE.—The statement of funded debt is inclusive of bonds to the amount of $352,000, issued in aid of internal improvements.

FLORIDA.—The statement of funded debt is exclusive of a large amount in bonds issued to railroad companies, of which the comptroller states that he has no account; and inclusive of bonds to the amount of $262,045 held by educational funds, and $45,000 held by the internal improvement fund.

GEORGIA.—The statement of funded debt is exclusive of bonds issued since 1868, and is stated by the comptroller to be that furnished him "by the treasury." The comptroller reports having approved bonds issued under certain laws of 1870 to the amount of $3,200,000. He estimates the assets of the State in bank and railroad shares at a cash value of $318,600.

ILLINOIS.—The statement of funded debt is exclusive of $1,165,407 due educational funds, on which the State pays interest annually. The auditor reports about $3,000,000 in the treasury applicable to the reduction of the funded debt. Since the date of this report, (April, 1871,) the auditor informed this office that such application had been made.

INDIANA.—The statement of funded debt is exclusive of internal improvement bonds, to the amount of $191,000, for the redemption of which the governor deems it probable the State may be obliged to make provision; and inclusive of bonds to the amount of $3,734,268 held by educational funds.

IOWA.—The statement of funded debt is inclusive of bonds to the amount of $234,498 held by the school fund.

KANSAS.—The statement of funded debt is inclusive of bonds to the amount of $66,900 held by the sinking-fund, and $207,325 by educational funds.

KENTUCKY.—The statement of funded debt is inclusive of bonds to the amount of $1,652,087 held by the board of education. The entire unfunded debt is due to the sinking-fund. The resources of the sinking-fund amount to $4,943,723, including stock in internal improvements of the nominal value of $2,544,359, together with the unfunded debt of the State above mentioned.

LOUISIANA.—The statement of funded debt is exclusive of bonds to the amount of $15,395,000 yet to be issued by virtue of existing acts to railroad and canal companies; and inclusive of bonds to the amount of $993,500 held by educational funds; $198,000 by the redemption fund; $1,992,000 issued in payment of State subscription to railroad stock; $1,146,000 issued in aid of railroads and canals; $4,838,933 loaned to banks. The statement of unfunded debt includes $200,000 due the educational fund. The auditor states the resources of the redemption fund at $231,000.

MAINE.—The treasurer reports the credit balance of the trust funds held by the State at $2,018,308, of which $1,270,726 belongs to the sinking-fund, and $426,254 to various educational funds.

MARYLAND.—The statement of funded debt is inclusive of liabilities incurred in aid of railroads, canals, &c., in which institutions the State owns productive stocks to the amount of $5,552,970, and unproductive stocks nominally valued at $20,115,708. In addition to the foregoing the comptroller reports productive stocks held by the sinking-fund to the amount of $1,764,450.

MASSACHUSETTS.—The auditor reports resources in the sinking-fund, applicable to the reduction of the funded debt, to the amount of $15,030,642; also, trust funds (school, &c.) to the amount of $2,957,096.

MICHIGAN.—The statement of funded debt is inclusive of canal bonds, guaranteed by the State, to the amount of $83,000. The auditor reports the credit balance of the various trust funds at $2,292,356.

MINNESOTA.—The statement of funded debt is exclusive of $4,026,750, which is the principal and unpaid interest to January 1, 1870, of certain State railroad bonds, for the payment of which no provision has yet been made by law. The school fund holds the entire funded debt. The auditor reports the resources of the sinking fund at $64,497.

MISSISSIPPI.—The statement of funded debt is exclusive of bonds to the amount of $7,000,000, of which the principal and interest have remained unpaid since 1842. The statement of unfunded debt includes $1,138,494 due to the educational funds. The auditor reports bonds and stocks held by the State, to the amount of $966,674, as security for loans to railroads, &c.

MISSOURI.—The statement of funded debt is exclusive of bonds to the amount of $3,000,000 issued to the Hannibal and St. Joseph Railroad, for which the State is, in the opinion of the auditor, amply secured, and inclusive of all bonds issued to other railroads. The State debt proper is stated by the auditor at $438,000.

NEBRASKA.—The school fund holds the entire funded debt.

NEVADA.—The statement of funded debt is inclusive of bonds to the amount of $58,000 held by the "irreducible school-fund." The comptroller reports a balance of $86,121 in the "State interest and sinking fund."

NEW HAMPSHIRE.—The statement of unfunded debt includes $45,019 due to the various trust funds.

NEW JERSEY.—The statement of funded debt is inclusive of bonds to the amount of $183,000 held by the educational fund. The treasurer reports $283,000 in the sinking-fund, and that the State owns stocks and securities to the amount of $1,587,370.

NEW YORK.—The statement of funded debt is that reported by the comptroller after the application of balances in the sinking-fund, and is inclusive of bonds to the amount of $2,845,307 held by the various trust funds.

NORTH CAROLINA.—The statement of funded debt is inclusive of ante-war bonds to the amount of $8,387,200; *non-marketable* bonds issued to railroad companies in 1861–'62–'63, to the amount of $1,128,000; and "special tax bonds," issued since the rebellion, in aid of internal improvements, to the amount of $11,407,000.

OHIO.—The statement of funded debt is exclusive of "irreducible State debt," (school and trust funds,) to the amount of $3,935,290. The auditor states the amount in sinking-fund at $270,225.

OREGON.—The secretary of state reports the amount in the treasury, applicable to the redemption of bonds, at $19,917.

PENNSYLVANIA.—The auditor general reports the amount of stocks, bonds, &c., held by the State, at $11,254,322.

RHODE ISLAND.—The statement of funded debt is inclusive of bonds held by the school fund to the amount of $3,940.

SOUTH CAROLINA.—The statement of funded debt is inclusive of bonds to the amount of $970,000 issued in aid of railroads, and $484,445, "fire loan of 1838," for the last of which the State is, in the opinion of the comptroller general, fully secured by the assets of the "State Bank." The comptroller general reports that the State owns shares in railroads, &c., to the amount of $2,290,700.

TENNESSEE.—The statement of funded debt is inclusive of bonds, to the amount of $27,546,961, loaned to railroad and turnpike companies, and interest thereon; and exclusive of bonds of railroad companies, indorsed by the State, to the amount of $2,172,000. The comptroller reports the State debt proper, including its funded interest, at $4,818,544, and that the State is secured on account of the loans and indorsements above mentioned, to the nominal amount of $27,061,681, estimated by him at a cash value of $22,032,844.

TEXAS.—The statement of debt is the estimate given by the comptroller November 30, 1870, and, according to his statement, does not include bonds for frontier protection, to the amount of $750,000, yet to be issued; or any liabilities that may have been contracted by the State in granting aid to railroad companies; or the amount due to the United States on account of the "direct tax;" or the amount which may be decided to be due the common-school fund on account of "bogus" payments made thereto during the rebellion.

VERMONT.—The treasurer reports $196,194 in the sinking-fund.

VIRGINIA.—The statement of funded debt is exclusive of stocks and bonds of the State, to the amount of $1,543,670, held by the board of the literary fund.

WEST VIRGINIA.—The debt is included in that of Virginia, no division having yet been made.

WISCONSIN.—The statement of the unfunded debt includes $2,183,800 due the school and other trust funds.

NOTE 1.—The great reduction in the assessed values of personal property in the Southern States since 1860 is, in the main, due to the emancipation of the human chattels which, at the Eight Census, formed so large a portion of the wealth of those States.

NOTE 2.—It needs to be stated that the fiscal years of the several States fail to coincide, and the figures in the tables of Wealth, Taxation, and Indebtedness, following, are not, therefore, all taken at precisely the same date. In each case, however, the last fiscal returns accessible have been used in the compilation. These tables have been prepared with the utmost care, and have, in every case, been submitted to the criticism of the proper State officers.

NOTA BENE.—The following tables were furnished in advance sheets to the public press in April, 1871. The comments of certain journals thereon have seemed to call for a caution from the Superintendent as to the use to be made of these figures for purposes of comparison between 1860 and 1870. The difference between the published "True Valuation" at the two censuses (fourteen thousand five hundred millions, excluding the value of the slaves in 1860, thirty thousand millions in 1870) has been by some treated as measuring the growth of the actual wealth of the country in the decade. It will easily be gathered, from the remarks already submitted, that it is the belief of the Superintendent that the estimates of the value of property at the census of 1860 were made generally without any appreciation of the principles which should govern in the treatment of the subject, and that the results were, for nearly all the States, defective, while, in some, the statements of value were so far below the fact as to be unworthy of publication. Undoubtedly, of the apparent gain of 107 per cent. in the valuation of the United States, between 1860 and 1870, 20 to 30 per cent. is due simply to heedless and ignorant understatement in 1860. The Superintendent, however, while holding this opinion decidedly, had not proposed to himself to state it so strongly; but the newspaper comments referred to have shown the necessity of a distinct explanation on this point.

Besides this, allowance must be made for the general advance in prices due to the condition of the currency. While this tendency to the exaggeration of prices has affected those classes of property which constitute what is popularly known as fixed capital far less than it has those classes of property which make up the "floating capital" of the country, and very much less still than it has affected the portions of such floating capital which consist of articles immediately merchantable,* the valuation of 1870 cannot have been increased by less than 30 to 40 per cent. through the effects of currency inflation since 1860.

What remains of the nominal increase in valuation between 1860 and 1870, after these two deductions are made, measures the substantial growth of the country in realized and husbanded wealth.

---

* The price of labor—wages—probably falls in this respect between this class and the one just preceding. The order in which these several subjects receive the impulse to a rise in price, proceeding out of currency inflation, may, on these assumptions, be stated as follows:

1st. "Commodities," *i. e.*, articles immediately merchantable.
2d. Labor.
3d. Floating capital not included in No. 1.
4th. Fixed capital in its various forms.

TABLE I.

WEALTH, TAXATION, AND PUBLIC INDEBTEDNESS

IN

THE UNITED STATES,

(BY STATES AND TERRITORIES,)

AT THE CENSUSES OF 1870, 1860, AND 1850.

TABLE I.—THE UNITED STATES.

NOTE.—It has not been thought advisable to attempt a valuation of the property of the General Government. The total of receipts into the National Treasury for the Treasury, on the 1st day of June, 1870, as appears in the statement of the Secretary of the Treasury, was $2,406,562,372. Adding these amounts to the proper

TABLE I.—THE UNITED STATES.

fiscal year ended the 30th day of June, 1870, as appears in the report of the Secretary of the Treasury, was $411,255,479. The national debt, less the amount in the columns of this table, the aggregate public income of the country becomes $688,520,435, and the aggregate public indebtedness $3,271,871,768.

The "Not distributed among counties" in the assessed value column includes all property which is not *assessed* in the grand lists for the several counties; but in the true valuation column it includes only the valuation of railroad property, an estimated distribution of the other property having been made by the deputy.

The total receipts into the State treasury during the fiscal year were $2,212,837, of which $699,983 were from direct taxes; $441,904 from insurance companies, ($226,368 of which were for past-due taxes, accrued since 1863;) $372,692 from savings banks; $312,255 from railroad companies; $35,703 from other corporations and foreign stockholders; $300,119 from school funds; and $50,181 from miscellaneous sources.

The total disbursements from the State treasury were $2,207,143, of which $11,025 were for the executive department; $77,440 for legislative expenses; $191,422 for judiciary; $15,916 for hospitals and institutions for deaf and dumb, blind, and idiotic; $304,061 for educational purposes and schools; $193,406 for interest and purchase of bonds; $13,612 for printing; $64,189 for public buildings; $142,717 for families of volunteers; $38,000 for militia; and $155,055 for salaries and miscellaneous contingent expenses.

The total receipts into the State treasury during the fiscal year were $1,090,950; of which $360,000 were from taxes on real and personal estate; $429,950 from corporations, (express and insurance;) $200,849 from interest; $21,076 from licenses, &c.; $51,400 from loans, (refunded;) $25,030 from war claim paid by United States; and $2,645 from miscellaneous sources.

The total disbursements from the State treasury during the fiscal year were $1,055,477; of which $31,843 were for the executive department; $56,980 for the legislative department; $44,931 for the judicial department; $138,029 for State prison; $20,051 for reform school; $60,958 for charitable purposes; $136,284 for education and schools; $53,949 for printing; $283,000 for sinking-fund; $82,389 for war-fund, (extraordinary;) $60,000 for special loan, (extraordinary;) and $87,063 for miscellaneous purposes.

For the purpose of *State* taxation the assessed valuation of real estate above given is reduced by deducting the amount of mortgages thereon, thus making the above total of assessed value of real estate $91,607,710 in excess of the amount on which a *State* tax is levied. It is not practicable, however, to distribute this deduction among the various counties.

STATISTICS OF AGRICULTURE.

REMARKS UPON THE STATISTICS OF AGRICULTURE.

The following extracts from the pamphlet of "Instructions to Assistant Marshals" will serve in explanation of these tables:

FARMS, for the purposes of the Agricultural Schedule, include all considerable nurseries, orchards, and market-gardens, which are owned by separate parties, which are cultivated for pecuniary profit, and employ as much as the labor of one able-bodied workman during the year. Mere cabbage and potato patches, family vegetable-gardens, and ornamental lawns, not constituting a portion of a farm for general agricultural purposes, will be excluded. No farm will be reported of less than three acres, *unless* five hundred dollars' worth of produce has actually been sold off from it during the year. The latter proviso will allow the inclusion of many market-gardens in the neighborhood of large cities, where, although the area is small, a high state of cultivation is maintained and considerable values produced.

A FARM is what is owned or leased by one man and cultivated under his care. A distant wood-lot or sheep-pasture, even if in another subdivision, is to be treated as a part of the farm; but wherever there is a resident overseer, or a manager, there a farm is to be reported.

By "Improved land" is meant cleared land used for grazing, grass, or tillage, or lying fallow.

Irreclaimable marshes and considerable bodies of water will be excluded in giving the area of a farm improved and unimproved.

In reporting "Live stock," columns 12, 13, and 14, sucking-pigs, spring-lambs, and calves, will be omitted.

In the "Produce of the year" will be included the total of all crops, &c., whether consumed at home or sold off the farm.

By "Clover and grass seed" is intended only that which has been cleaned for use or prepared for market.

Under "Home manufactures" is to be included the value of all articles manufactured on the farm, whether for home use or for sale, when the same has not been reported among the products of industry, (Schedule No. 4.) The value of materials *purchased* for such manufactures will be deducted.

The total value of "Annual production," column 52, is intended to exhibit the total results of all the labor of the farm during the year whether in the production of crops, in additions to stock, in fencing, or in improvements of any description, so far as the same are due to farm labor. Building, fencing, &c., by professional mechanics, will not be included. Neither will a speculative rise of land, nor an enhancement of values by the opening of railroads, &c., be reckoned in the annual production of the farm.

THE CENSUS AGRICULTURAL YEAR.

The first question, logically, which arises in respect to what purports to be a statement of annual production, viz: "What is the year covered by the report?" is one which it is impossible to answer in respect to the tables of agricultural production in the census of the United States. The schedule annexed to and made a part of the law of 1850 requires the products of each farm in the United States "for the year ending June 1." But there is no agricultural year ending June 1. The division made by the law is a purely artificial one, and cuts the agricultural year in twain.

As a matter of fact, as the census under existing laws always has been and always will be taken, the production returned is not the production of any one year distinctly, but is made up, without any determinable proportion, indifferently from the production of two years.

The enumeration at the Ninth Census, for example, beginning upon the 1st of June, 1870, assistant marshals obtain for a month or two the production of 1869 in the main, although in some sections many of the crops (notably hay, wool, and some of the grain crops) are already so far advanced that the farmer is quite as likely to estimate his annual production (it must be remembered that few of the statistics of production are obtained as transcripts from actual accounts) from his impressions in regard to the growing crop, as by recalling the experience of the previous year. As the enumeration progresses through September and October, the crop of 1870 is returned in increasing proportions, earlier in some parts of the country than in others, and earlier in respect to some crops than to others in the same section. As the work is protracted through November and December, and, through the utter

want of control at the central office, is allowed to drag, in some counties, through January and February, the crop of 1870 becomes the only one that is in contemplation of either the farmer or the assistant marshal in filling up the agricultural schedule.

NUMBER AND SIZE OF FARMS.

The preparation of the tables distributing the total number of farms returned at the census into classes, according to the number of acres of improved land in each, has been attended with unusual difficulty at the present census, in consequence of the extraordinary and wholly anomalous condition of agriculture at the South. The plantations of the old slave States are squatted all over by the former slaves, who hold small portions of the soil, often very loosely determined as to extent, under almost all varieties of tenure.

In the instructions to assistant marshals in preparation for the census, and during the early days of the enumeration, efforts were made to impose something like a rule which should govern in the returns of agriculture at the South; but after a weary and unprofitable struggle, the Superintendent was fain to accept whatever could be obtained in regard to the agriculture of that region, without greatly criticising the form in which it came. To have insisted upon a logical treatment of the subject would have been equivalent to giving up the agricultural statistics of the year.

For the reasons above stated it became necessary to distribute among the several classes, in the tables under discussion, a great number of farms, in each of the former slave States, of undetermined acreage. The plan adopted has been to treat all such farms as being of more than three* and less than ten acres. Undoubtedly, in ninety-nine out of every hundred instances, this assumption answered to the real facts of the case. Of the remainder it is enough to say that nothing better could be done with them under the most unfortunate circumstances attending the enumeration.

A comparison of the number of acres of land in farms in 1870 with that in 1860 will show that the only States in which there has been a falling off in the amount under cultivation are, first, those in which slavery existed in 1860, and in which conditions growing out of the change in the system of labor have prevented a complete rehabilitation of agricultural industry; or, second, those of New England, in which the decrease is mainly due to the extension of manufacturing towns and villages; or, third, as in the case of New Mexico and Virginia, where territory has been set off to create new States or Territories.

THE LIMITATIONS OF AGRICULTURAL STATISTICS.

The agricultural statistics of the United States under the present census law, being obtained by the visitation of each farm in turn, attain a high degree of accuracy in respect to all crops which are of considerable importance, either for the whole country or for the particular section under enumeration.

The above qualification expresses quite exactly the principal limitation of the agricultural statistics of the United States. The census has little authority in respect to minor productions. Where a crop is of small importance, or is only occasionally cultivated, the assistant marshal will naturally and almost inevitably fail to put the question at every house. The farmer, on the other hand, on account of its little importance among the products of the year, will fail to mention it, and the result will be an inadequate representation of that crop.

So general and positive is the law of the human mind under which such omissions take place, that some of the inquiries of the Agricultural Schedule might just as well be dropped. The results are hardly worth publishing, and, if taken without the present qualification, are calculated only to deceive.

This much is true, however, that certain crops which are only rarely cultivated, and that in small amounts, in the great majority of States, and are therefore in those States inadequately represented, become of importance in some single section and are there returned with reasonable completeness. If, then, due allowance be made for the omissions in the sections where the crop is of little account, a very tolerable result for the entire country may be reached.

This frank admission in regard to the slight value of the statistics of the census in respect to the minor crops should have no effect to disparage the authority of its statements in respect to the staple products of the country as a whole, or of any section. The very laws of mind by which the former lose even the slight attention they deserve, give the strongest assurance for the general completeness and correctness of the latter.

---

* Less than three acres not constituting a farm for census purposes, with a single class of exceptions only occurring in the immediate neighborhood of large cities, with land in a high state of cultivation.

A second limitation of the agricultural statistics of the census is found in the inapplicability of the schedule to sections in the condition of the several Territories, as also of the State of Texas, and some portions of the States of California, Kansas, and Nebraska. That schedule was framed wholly with reference to the agricultural requirements of the older States, where the land is divided up into well-defined farms, and the operations of a comparatively advanced agriculture are systematically carried on. It is utterly inadequate to represent the grazing industry of the great plains beyond the Missouri, and the results in respect to this region might, perhaps, have been omitted from the publication with credit to the census.

WOOL.

The census statistics of wool for the Seventh and Eighth Censuses have been severely criticised by "the trade" on account of the low average clip per head reported throughout the country, and more especially in certain of the States.

It is doubtful whether the average yield of wool, as shown by the ratio between the number of sheep returned in the census and the number of pounds of wool returned, will ever reach the average weight of fleece as reckoned by the trade. This is due, unquestionably, in part to the fact that the average taken by the wool-brokers for the purposes of this comparison is the average under favorable conditions. Still, it must be admitted, as the result of candid investigation, that the figures of the trade have been much nearer to the truth than those of the census, in this particular, in the great majority of States. In certain of the States, however, (notably those of the South,) issue must be taken with the statements of the trade. It is not questioned that single flocks of sheep, receiving adequate care and attention, and kept with a view to the wool product, in any one of these States, might, under fortunate conditions, yield an average weight of fleece equal to what is claimed. But a very extensive correspondence conducted by the Census Office—more extensive, unquestionably, than any ever conducted by private parties—enables the statement to be made with confidence that in some of the Southern States a large portion of the sheep owned are not kept with a view to the wool product, and are actually not sheared. So general is this as to reduce the aggregate clip in those States more nearly to the figures of the census than to those of the trade.

In all the States, however, where sheep are kept in considerable numbers for the sake of the wool crop, and in the northern and western States generally, there is no doubt that the return of wool in previous censuses has been partial, and the average weight, therefore, brought below the undoubted facts of the case. This has been due partly to the fact that all wool used in "Domestic manufactures" (as returned upon the Agricultural Schedule under the law of 1850) is properly excluded, in order to avoid a duplication of value; also, to the fact that the aggregate number of sheep is made up in part of very small flocks, or single animals, whose product of wool is so inconsiderable that it is never marketed, or, if marketed, escapes mention among the farm productions of the year; also, to the fact that large numbers of sheep are sold to butchers, who in turn sell the wool on the skin, making no return of any portion of their industry upon the Schedule of Agriculture; also, probably, to the fact that in spite of instructions from the Census Office, a considerable number of spring lambs are included in the report of sheep, thus reducing the average yield; also, probably, to the fact that a portion of the wool returned was either cleaned before being sold from the farm, or was stated by the farmer "discounted," according to the usual loss in cleaning. Of these five causes, the second and third are by far the most influential. For the purpose of ascertaining the extent of omissions to return wool where sheep are reported, the agricultural schedules of 1860 for the State of Iowa have been carefully examined, with the result that 2,416 farms, with an aggregate of 24,067 sheep, (out of a total of 259,041,) were found for which no production of wool was returned. In a very small proportion of these cases the sheep may have been brought upon the farms after shearing-time, and consequently their product would be embraced in the return of other farms; but, after all reasonable deduction on this account, the fact would still remain that no product of wool was returned for at least eight per cent. of the sheep owned in this State at the last census.

HORSES AND CATTLE NOT UPON FARMS.

The census law of 1850 makes no provision for enumerating live stock not found upon farms. As a consequence, the returns on the Agricultural Schedule fail to include the large number of horses and yoke-oxen which are kept in cities, towns, and villages for draught or driving, and also to include the not inconsiderable number of milch-cows found in cities, towns, and villages, as above, as well as those belonging to persons following commercial, mechanical, or professional pursuits in agricultural regions.

At the census of 1850 no effort appears to have been made to supplement the returns of live stock on the Agricultural Schedules by any calculation or estimate of the number not upon farms.

At the census of 1860 assistant marshals were requested, each in his own subdivision, to prepare estimates of the number of animals, of each recognized class, not found upon farms in the course of enumeration. This request appears to have been quite generally complied with. The results will be found upon page 192 of the Agricultural volume of that census.

No effort of this kind has been made at the present census; but the Superintendent has sought to place himself in possession of all statistical data of a positive character in existence upon this subject, and by comparison of these data, and with consideration of the varying conditions of settlement and employment in each section, to prepare himself to make an intelligent estimate of the number of horses and of neat cattle, respectively, omitted from enumeration by reason of the defect noted in the census law. In some cases statistical data of a high character were accessible in the form of State censuses or reports of State auditors made up from the returns of local assessors. The number of such animals in nearly fifty important cities was accurately determined by reports from the police authorities, and many towns and villages, and some rural counties in States not furnishing other official data, were canvassed with reference to this subject. The known habits and conditions of settlement, society, and occupation in each State became also elements of great importance in these computations.

The result of the comparison of these various classes of statistical data in the light of such considerations as are indicated above will be found in the following table. For convenience of reference the corresponding figures for 1860 and 1850 are reproduced in the connection.

It is hardly necessary to remark that the large relative falling off in the live stock of the country between 1860 and 1870 is due in great part, if not entirely, to the tremendous waste of four years of war.

(a) At 1850 no attempt appears to have been made to ascertain the number of horses or neat cattle *not* on farms.
(b) Corrects an error of —4,000 in the total of this column as published in the census of 1860.
(c) At 1860 and 1850 Virginia includes West Virginia.

CHEESE AND WINE.

It should be observed that the cheese returned among the productions of agriculture includes only the cheese made upon the farm. The product of cheese-factories will be found in the proper place in the statistics of manufactures.

In the same manner the production of wine will be found both in the tables of agriculture and manufactures, according as the wine is made upon the farm or vineyard, and consequently by agricultural labor, or in large establishments of a purely manufacturing character.

ANIMALS SLAUGHTERED.

For the same reasons that the statistics of agriculture are uniformly inadequate for the Territories, and for sections of Kansas, Nebraska, California, and perhaps the whole of Texas, the returns of "Animals slaughtered and sold for slaughter" from those regions will fail generally to include the flocks and herds that graze over fields and plains not embraced in defined farms. Thus, the aggregate of all the returns under this head for the Territories and for the States named is only $17,171,046.

Unfortunately there are not sufficient data within reach to enable one to form even an estimate of the values thus omitted. There is also a considerable loss in the older States from the fact that large numbers of cattle are sold from farms to traders and speculators, to be turned into beef at one time or another, as occasion may serve or necessity require or the market justify, while yet the farmer cannot properly report them as "Sold for slaughter," as he can know nothing of the plans of the purchaser.

Notwithstanding this liability to omission, the returns under this head for 1870 show a handsome increase from the last census, aggregating $398,956,376, against $213,618,692 reported in 1860.

THE COTTON CROP.

From the joint effect of two of the causes above indicated, viz, the anomalous conditions of land in the Southern States, and the splitting of the agricultural year by the artificial date given to the enumerations of the census, it might be expected that the return of the cotton crop in the census would be peculiarly liable to objection. The aggregate crop returned to the Census Office has been 3,011,996 bales. Taking into account the period fixed for the enumeration, (June 1, 1870,) it will be seen that this is substantially the crop which was planted between February and May, 1869, harvested between September, 1869, and February, 1870, and marketed between September, 1869, and September, 1870. It should be added that the bale recognized in the census law of 1850 was the bale of 400 pounds.

AGGREGATE VALUE OF FARM PRODUCTION.

Column 7 of the Tables III and IV, following, purports to give the aggregate value of all the farm productions of the year.

The inquiry by which these statistics were obtained was, as explained in the report of the Superintendent, prefixed to the Population volume, introduced into the Agricultural Schedule at the present census.

The reasons which appeared to justify this innovation were found in the difficulty which has attended, and the ill-success which has followed, every attempt to reach anything like the true aggregate value of the farm production of the United States by means of the incomplete, and withal somewhat fragmentary, data furnished in the amounts given in the census of certain crops, embracing, it is true, almost all of the staples of the country, and some of less importance, yet far from covering the entire field of American agriculture.

Whenever efforts have been made to fix an average price for each of these reported products, and to supplement the statement by the value of the minor and miscellaneous products of the year, the result has invariably been a failure, more or less conspicuous. No estimate of the agricultural productions of the United States is known to the Superintendent which is entitled to much more than the credit of good intentions.

The cause of this failure is not found alone in the want of data by which to reach the sum of the numerous and, in a few cases, the considerable elements of production which are not recognized on the schedules of the census. The degree of error to which estimates in respect to these are liable is perhaps not greater than the probable error

in calculations of value from quantity in the case of the products which do appear on the schedules. It is no exaggeration to say that to fix a true average price for any crop cultivated in as many as half of the States of the Union, would be a work of not less difficulty than to fix the true center of population of the United States. That this would be so, were scientific precision required, would probably not be questioned. But it may be thought that it would yet be practicable roughly to determine the average price of such an article, with such limits of error only as would be inappreciable when applied to the entire crop, or would be offset by errors in an opposite direction during the further course of such calculations. Such, however, is far from being the fact. There is no crop named on the census schedules, cultivated in as large a number of States as that mentioned, for which an average farm-price could be fixed with the least approach to accuracy, while from the degree of uncertainty that prevails in respect to the entire schedule, as well as in regard to the elements omitted from enumeration, an error of from five hundred to a thousand millions would be pretty much a matter of course.

In the foregoing remarks reference is made to such estimates as have sought to obtain the value of the agricultural products of the country to the agricultural interest purely; the value of the farm production to the farmer; the value of the crops of the United States before the elements of transportation and exchange have been introduced. It is easy, from daily quotations, to reach an average price of any single commodity in any one of the principal markets of the country; it is even possible to reach an average price which shall be based not only on the several market averages attained, but also, to a reasonable extent, upon the amount sold at each such local average; but to tell how much of the aggregate value thus reached has remained in the hands of the farmer is quite another matter.

The Superintendent has no desire to pursue this subject further than to show at once the novelty and the importance of this new feature of the census, nor is it necessary to multiply illustrations to accomplish this result. It is sufficient barely to allude to such notorious facts as corn selling in New England at 90 cents and being burned for fuel in Iowa; wheat selling at $1 35 in New York and for 45 cents in Minnesota; beef bringing $7 a hundred on the hoof in the East, while cattle are being slaughtered for their hides in Texas.

The total value of farm production reached in the following tables is believed to be as correct for the great majority of the States and counties of the Union as any statistical result can be expected to be. Here and there an assistant marshal may have slighted this portion of his duty, but in general the work has been well done. The product of each farm has been estimated upon the spot at its actual worth to the farmer, the officer of the Government and the owner of the land sitting down together to make out the statement. The aggregation of these results for two million six hundred and fifty thousand farms yields a total which must be taken as the most accurate determination of the value of the agricultural production of the country ever attained.

TABLE III.

PRODUCTIONS OF AGRICULTURE

IN THE UNITED STATES,

(BY STATES AND TERRITORIES,)

AT THE CENSUSES OF 1870, 1860, AND 1850.

NOTE.—It will be noticed in the columns of the above table devoted to the census of 1860, that the number of farms of each specified class in the United States and in every State and Territory except Nevada, when added, fail to produce the total number of farms found in a previous column of the table. These discrepancies appear without explanation on pages 221 and 222 of the volume on Agriculture of the census of 1860.

TABLE VI.—THE UNITED STATES.

THE SCALE FOR THE CROP MAPS.

In constructing the scale adopted for the several crop maps (dairy products excepted) of the present volume, the number of bushels, tons, or pounds (according to the unit of quantity appropriate to the special crop) produced in each county, by turns, was divided, first, by the number of inhabitants, and, second, by the number of acres of improved land in the county; the two quotients thus obtained were multiplied together, and the square root of the product taken as the measure of the productive power, in respect to that crop, of the county. This mode of constructing the scale for the crop maps must be admitted to be somewhat arbitrary. The Superintendent can only say for it that he believes it effects the object in view better than any other, and that he knows of no other scheme for exhibiting these features of production to which more objections do not lie than to the one here adopted.

The problem in respect to any crop is to exhibit the importance of the crop to each section of the country, and also to exhibit the importance of the section, so to speak, to the crop of the country. Moreover, if it should prove in any way practicable, it would be in every way desirable, to exhibit productive capacity as well as actual production, or at least to give those sections in which an industry is not yet extensively pursued, but where the facts of present production indicate a capability of increase, a certain preference over sections which show the same absolute yield, yet have manifestly reached their maximum limit of production.

Such being the points which it is desirable to compass in a pictorial representation of a given crop, say wheat, several modes of obtaining the relative *power*, in this respect, of different sections, States, or counties, suggest themselves to the mind. More than one of these might, perhaps, be advantageously adopted, were it practicable in the construction of such a map to take the township as the unit of treatment; but as this is wholly impracticable in dealing with so large a field as the United States, the county—embracing, as counties generally do with us, town and country, manufacturing, commercial, and agricultural populations alike—being the lowest unit of treatment that can be taken for the purpose, the reflections and the tentative computations of the Superintendent satisfied him that no one simple ratio could be found which would not, in many cases, grossly exaggerate, and in other cases as unjustly disparage, the importance of the crop to the county and of the county to the crop.

It is evident, without argument, that to say that one county raises twice or three times as much wheat as another, without any reference to the extent of lands embraced in each, is to furnish no just ground for a comparison of the two counties in respect to their wheat production. On the other hand, to divide the aggregate crop of each county by the population, and thus to obtain the *per capita* production of wheat, yields just as little of a true measure, without reference being had to the proportion of persons in each pursuing commercial or manufacturing industry. For example, one county of an equal breadth of agricultural lands, and with a much higher yield per cultivated acre than a neighboring county, might be brought far below that other upon a *per capita* scale, by reason of the fact that it possessed, in addition, a considerable manufacturing industry, or embraced within its limits a single large town. Orange County, New York, compared with almost any other county of the same State, is a case in point.

Again, the *per capita* test may be defective in another and large class of cases, as between agricultural sections sparsely settled and agricultural sections densely populated. Thus, of two counties of equal area, and with populations wholly devoted to agriculture, and even to the culture of that one crop only, a county having ten thousand inhabitants, and producing three-quarters of a million bushels of wheat, or seventy-five bushels *per capita*, ought, unquestionably, to be rated higher on the scale of wheat production than the other, having but five thousand inhabitants, yet producing to the extent of four hundred thousand bushels, or eighty bushels *per capita*. One thousand farmers, sprinkled over a large western county, and picking out only spots especially favorable for cultivation, ought to produce a larger *per capita* crop than three thousand or five thousand farmers whose operations would cover the whole available surface of the county, and call into cultivation even the least desirable soils.

The considerations thus briefly sketched will probably suffice to show the unfitness of any one of the ratios already treated of to exhibit by itself the agricultural or crop rank of counties. The ratio more popularly taken for the purpose, viz, that between the number of acres cultivated in the crop and the yield thereof—that is to say, the number of bushels, tons, or pounds to the acre—would be still more unsuited to the object, even were the requisite data given in the census, as they are not. Without reference to the breadth of land sown, the report of the average yield per acre affords a most fallacious representation of the productive power of any region. The cultivation of any crop as a fancy crop, or upon the more favorable soils only, gives results wholly disproportionate to what would be the fact were that crop to be generally cultivated as an essential part of the industry of the people, and extended over a considerable area. There are sections of the United States at the present time where wheat is grown upon narrow strips of land along streams, with a yield reaching thirty five, forty, and forty-five bushels to the acre, where, if the crops were to be extended over anything approaching the proportion of land which, in a county of Iowa or Minnesota, is put into wheat, the yield would not average ten bushels to the acre. These are extreme cases, but the objection lies, in a degree, against the use of the "acreage" test, as between any two agricultural sections.

The above somewhat desultory remarks, though far from exhausting the subject, will, perhaps, suffice to show that no one element affords the means of truly measuring the productive power of counties relatively to each other. It was these considerations, and others into which it is not deemed necessary to enter at this time, which convinced the Superintendent that it was desirable to compound at least two elements for the purpose. The two elements taken are, as stated in the first paragraph of these remarks, first, the number of bushels, tons, &c., to each inhabitant; and, second, the number of bushels, pounds, &c., to each acre of improved land. These are believed to be the elements having the most importance in the connection, and the method of treating them, viz, by compounding them and taking the square root of the product, is believed to be the best method, as tending to reduce any extravagant excess of one element over the other, due to exceptional conditions. Undoubtedly, instances may be found on the maps thus constructed affording opportunity for cavil, and even occasion for legitimate criticism; but the Superintendent is satisfied, and believes that any one who carefully examines the subject will be satisfied, that the effect has been, in respect to each crop to which a map is devoted, to exhibit, almost without an exception, the important and the insignificant sections of the country distinctly from each other; and, secondly, that the sections which are of importance in respect to any crop thus represented will be found to be ranged very generally in the true order of their importance.

NOTA BENE.—Exception to the above statements must be made to this extent, viz, that in the Territories of the United States, where counties are oftentimes as large as whole States East, small portions only being settled, the county was dropped as the unit of treatment, and the field of actual settlement, great or small, was treated according to the method herein adopted.

THE STATISTICS OF MANUFACTURES.

REMARKS ON THE TABLES OF MANUFACTURING INDUSTRY.

THE SCOPE OF THESE STATISTICS.

The following tables purport to exhibit the production of every mill, factory, or shop in the United States in which any class of mechanical industry is carried on to the extent of producing the value of $500 a year. Inasmuch as, with ruling prices of labor and materials, few able-bodied artisans working ten months in the year but produce to the value of $500, these tables should comprise all the results of substantially all the manufacturing and mechanical industry in the country. Between this, the theory of the case, and the facts exposed to criticism in the following tables, will be found a difference so great as only to be accounted for by a full explanation of—

THE MODE OF COLLECTING THESE STATISTICS.

(1.) The enumeration of "establishments of productive industry" is, by the census law of 1850, charged upon the regular assistant marshals, each in his own subdivision. (2.) The schedules provided by law propose a limit of $500, falling below which, the production of no establishment need be returned in the census. (3.) The law failing to provide for the use of "prior schedules," to be left in advance, filled up at leisure, and called for by the enumerator on his rounds, the assistant marshal has but one opportunity to reach the proprietor of any establishment, except by going back upon his track, and performing a second or a third time this the most tedious part of his duty, for which repeated visits the law allows him no extra compensation. (4.) It is also of the highest importance in this connection that the sum paid under the act of 1850 for the complete and satisfactory enumeration of an establishment of productive industry is 15 cents. Such, in brief, is the mode of collecting the statistics of manufactures.

HOW IT WORKS.

There is here occasion, and, indeed, provocation, for omissions in five or six distinct ways:

1st. The collection of manufacturing statistics is made merely an incident to the enumeration of population, and, like all other duties incidental, is certain to be neglected, more or less, in all but the rarest cases. The principal thing in the mind of the assistant marshal, and in the view of the community, is the enumeration of population. This is the subject upon which public attention is fixed, and the work of the enumerator in this respect is severely criticised. But there are few communities which take sufficient interest in the collection of their manufacturing statistics to secure that it shall be well done. So far is this indifference carried, that the Census Office has found it impossible to secure any assistance from boards of trade or chambers of commerce in some of the principal cities of the Union, for the revision and completion of the statistics of manufactures. Cities which resent bitterly the publication of the simple truth in respect to their population, will appear entirely indifferent to reports which seriously understate their wealth and productive industry.

Such being the condition of public sentiment, the assistant marshal, assuming that he is zealous and faithful in his general service, carries about the manufacturing schedule as a tedious and unwelcome duty—a duty to be discharged in the cheapest and easiest manner.

2d. Not one assistant marshal in five, probably not one in ten, has any considerable technical or even general acquaintance with manufactures. The appointments to this office are generally made from professional politicians, from lawyers, from agriculturists, or from clerks. The fact will be of more importance when we come to explain the failure to report intelligently and comprehensively the production of establishments which are actually returned in the census; but it is not without a decided bearing on the present question. Any one who stops to consider will see how easy it would be, in a considerable manufacturing town, for an assistant marshal visiting every inhabited dwelling, and enumerating thoroughly every family in the place, to omit many important establishments of pro-

ductive industry. There are instances in great cities like Philadelphia, where large industries are carried on below the sidewalk, and one might pass and repass frequently without receiving any intimation that hundreds of operatives, aided by steam-power, were working almost under his feet. The only entrance to many other establishments in such a city is from alleys or interior courts, where the work of enumerating families would not lead the assistant marshal; indeed, into which, with the best intention on his part, he would hardly find his way. Other establishments, in great numbers, are carried on beneath the same roof with more pretentious industries, or in lofts above stores. In numerous cases the most diverse industries not only occupy the same building, but take their power from the same wheel. Such are the difficulties which beset the enumeration of manufacturing industry. If every establishment occupied a distinct and an entire building, situated squarely upon a public street, and with some conspicuous blazon of what was going on within, it would then, beyond question, be the fault of an enumerator if a single one should be omitted from his returns; but when, instead, establishments of this nature are disposed about and hidden away with a promiscuousness and an intricacy of which the above will hardly convey an idea, it is not to be wondered at that an officer wholly unfamiliar with the manufacturing industry of his district, and perhaps unacquainted with the conditions of a single important industry, should make a very incomplete and partial return of production.

3d. Under the system of appointments to office, which prevails in the United States, scores and hundreds of assistant marshals, out of a body so large as that employed at the Ninth Census,* will perform their work with a purposed and even a defiant negligence. The rates of compensation being most inadequate in respect to the return of manufactures, this part of the census suffers most from this cause. The Superintendent has elsewhere and freely borne testimony to the zeal and patience with which the great body of assistant marshals at the Ninth Census encountered the difficulties and perplexities with which the ill-considered act of 1850 surrounded their work; but, it is nevertheless true that, in a sufficient number of cases seriously to affect the results of the census, assistant marshals performed their task in a manner which, were there proper facilities for inspection and supervision, and were the penal provisions of the census law more ample, would have brought them within the reach of criminal animadversion. The investigations of the Census Office, conducted at great disadvantage, discovered not a few cases where less than one-half of the establishments of productive industry, by law subject to enumeration, had been returned, or even visited by the assistant marshals. For such a degree of delinquency there is, of course, but one explanation possible.

4th. The temporary absence of some proprietors, the reluctance of more to return the production of their establishments, and the utter unpreparedness of others, in the absence of "prior schedules," as used in the census of all nations but this, cause numerous omissions of the character under discussion. For one or another of these reasons, assistant marshals are obliged to pass on in their enumeration without obtaining at a first visit the information required in respect to considerable numbers of establishments. In the majority of cases a second visit is successful, and a third round still further gleans the field;† but it often happens that the assistant marshal is obliged, in the course of his enumeration, to leave the neighborhood of such establishments, and go to remote localities, perhaps with a vague purpose of returning at some time to complete the work, or of obtaining the information by correspondence: a purpose, it is needless to say, which generally remains unaccomplished at the time when it becomes necessary to forward his returns to the Census Office.

5th. Perhaps the most simple of all the causes of omission in the Statistics of Manufactures is found in the fact that the necessities of enumerating the population of cities and large towns require their subdivision and the assignment of enumerators, according to lines of demarcation which, however natural or logical with respect to the population, do not correspond to the conditions of the manufacturing industry of the place. In no small proportion of the manufacturing establishments of cities and large towns, the factory where the hands are employed and the work is done is distinct from the office where the complete accounts of wages, labor, and materials are kept. The assistant marshal, in whose subdivision the former is situated, will probably not fail to visit it, inasmuch as the factory is, in the great majority of cases, a broad, staring fact which he can hardly overlook. He is told there, however, that the office of the concern is upon another street, perhaps in another ward, outside the territory assigned him. He assumes, therefore, that the assistant marshal who is charged with the enumeration of that section of the city in which the office is will embrace the establishment in his returns, and takes no more thought of it. That office, however, being, in all likelihood, in a room up two flights, surrounded by the offices of lawyers,

* Six thousand four hundred and fifty-one.

† Instances have been reported to the Census Office where the sixth visit failed to secure the desired results. Of course the natural suggestion is, "enforce the penalty of the law;" but, when serious crimes against the peace or against the revenue are so freely compromised or condoned, it is hardly to be expected that penalties for refusal to answer statistical inquiries will be very vindictively enforced. Moreover, assistant marshals shrink from encountering the odium incident to such a course.

engineers, banking, mining, and railroad companies, the assistant marshal of the subdivision sees nothing to indicate the presence of an "establishment of productive industry," and, in the best of good faith, passes it by.

This is not something which has occurred to the Superintendent as a possible source of error. It has been developed as the actual cause of omissions by the subsequent inquiries of the Census Office. It undoubtedly applies in fewer cases than most of the causes heretofore cited; but, on the other hand, the cases to which it does apply are likely to be of more than usual importance, as will appear from the fact of an office being maintained separately from the factory.

6th. All the foregoing reasons for the omission in fact from the census of establishments of productive industry which, by the census law, are subject to enumeration, apply in general to large as much as to small establishments. But the last reason which remains to be adduced, while it accounts for a larger aggregate loss from the total of manufacturing industry than any of the others, or all of them united, concerns only establishments of the smallest kind. The liability to omission, now to be noted, arises from the unfortunate exception in the census law, of all establishments not producing to the value of $500 annually. As a matter of fact, as before remarked, few artisans working at their trade in these days fail to reach that limit of production; yet, this setting up of such a limit amounts almost to an invitation to the proprietors of establishments producing anywhere in the neighborhood of $500 to escape enumeration through this form of exemption. Whenever the proprietor of such an establishment prefers for any reason not to return his business, or the assistant marshal reckons the trouble of a visit, perhaps of a journey as well as of a visit, at something higher than the 15 cents which the law allows him for the service, this unfortunate provision is made the excuse.

The experience of the census in 1860 and in 1870, with the production of four common and important mechanical trades, will give an idea of the scope of the omissions resulting from this cause. A comparison of the Tables of Manufactures with those of occupations for 1860, exhibits the fact that, of 51,695 painters, the production of only 913 is accounted for among the "products of industry;" of 242,958 carpenters, only 9,006 appear in the tables of manufactures; of 112,357 blacksmiths, only 15,720; and of 43,624 coopers, only 13,750; that is, of the first-named industry only 1.8 per cent. of the artisans contribute to the reported production of their craft; of the second, 3.7 per cent.; of the third, 14 per cent.; of the fourth, 32 per cent.; or, to aggregate these figures, out of 450,634 artisans of the most efficient and best-paid classes, only 39,389, or 9 per cent., are accounted for in the Statistics of Manufactures. Had the 411,245 artisans not returned produced as much, man for man, as those of the same trades who were embraced in the tables of production, the gross products of industry would, by the full representation of these four trades alone, have been increased $475,755,951, or a little over 25 per cent. of what was actually reported; while the net production, deducting, that is, the cost of materials consumed, would have been increased in a still higher ratio, namely, by $284,229,445, upon a total of $854,256,584, or, as closely as possible, 33⅓ per cent.

Now, it is true that where there is an exact correspondence between the titles in the Statistics of Manufactures and those in the Tables of Occupations, the number in the former should always be less than those in the latter, by reason of many artisans being sick, out of employment, or for some other cause not included in the return of any establishment. This reasonable excess of the number in the Occupation tables has elsewhere been indicated as ranging from 6 to 16 per cent., according to the character and conditions of the different industries recognized. It is also true that a considerable part of this aggregate omission arises from the fact that the census law provides for the enumeration of productive industry only as it is found in distinct "establishments," thus omitting from account that large body of labor, skilled and unskilled, which is not so attached. But, after making all possible allowance for these considerations, it still remains true that a number of shops equaling, possibly exceeding, the whole number actually returned,* were omitted from the census of industry as presumably below the limit of production ($500) fixed by the census law. When it is remembered that the value of materials as well as the cost of labor is embraced in the value of the products returned, it will scarcely be accepted that so many as one-half of the individual artisans thus excluded really failed, even at the prices of 1860, to produce to the value of $500 a year.

The omissions at the census of 1870 have not been quite so wholesale. Of 344,596 carpenters, 67,864 are accounted for in the tables of manufactures; of 141,774 blacksmiths, 52,982; of 85,123 painters, 10,964; and of 41,789 coopers, 23,314. Allowing for a mean excess of 11 per cent. in the Tables of Occupations over the Tables of Manufactures, we should have the production of 269,267 carpenters, 72,964 blacksmiths, 72,953 painters, and 15,911 coopers unaccounted for.

The more general return of the production of these trades in 1870 is due, firstly, to a general advance in prices,

* The number of establishments embraced in the Tables of Manufactures for 1860 was 140,433; of these 5,000 were never returned to the Census Office, but were estimated for. Number actually returned, 135,433. It has already been shown that out of four trades only, 411,245 artisans were omitted from the Tables of Production. Allowing, with extreme liberality, for the effect of the two other causes recognized above, the assertion in the text will still be within bounds.

both of materials and labor, between 1860 and 1870, bringing many shops incontestably above the $500 minimum limit; and, secondly, to stringent instructions to assistant marshals respecting establishments of this class. No efforts, however, will ever avail to secure the complete return of the production of these trades so long as this most unnecessary exception remains in the census law.

EFFORTS TO SUPPLY OMISSIONS IN RETURNS.

The power of the Census Office to discover and correct the errors in the Manufacturing Statistics arising from the liabilities to omission which have been indicated, is mainly confined to industries the operations of which are habitually carried on in large establishments, and in only such of these as, through trade organizations, or through trade publications, afford the means to the Census Office for testing the completeness of its returns without an actual re-canvass of the entire field for the purpose. To attempt to supply the omissions existing in the returns of the blacksmithing, carpentering, and coopering trades, or in a score of others, where industries are carried on in hundreds or thousands of small shops, scattered all over the face of the country, is not to be thought of. There are industries, however, in respect to which, though at great and almost undue trouble, the Census Office can reasonably satisfy itself of the degree of completeness attained in the returns of assistant marshals, and, even in an important measure, supply the deficiencies found to exist. Such are the cotton, the woolen, and the iron manufacturing interests, each of which maintains an association of proprietors of establishments, with more or less of central organization and of periodical correspondence. Such, in a less degree, are the boot and shoe, and the leather manufacturing interests.

Each of the industries named is carried on in from one thousand to twenty thousand establishments. There are a large number of other distinct industries which comprise from five to five hundred establishments each, in respect to the most of which it is practicable by extensive correspondence with leading manufacturers in each line, and with merchants dealing in goods of that general class, to obtain pretty complete lists of manufacturers, and, by a careful comparison, to detect omissions that may have occurred from any or all of the causes heretofore enumerated. There are others in respect to which, from the desultory way in which the industries are carried on, from the absence of organization within the trade, and even of mutual acquaintance among manufacturers, or from the want of a disposition on the part of those to whom the Census Office was obliged to appeal for assistance in this work, it has been found impossible to secure any adequate check upon the returns of assistant marshals; and the statistics are given, therefore, pretty much according to the original returns, without any means of verifying their completeness or accuracy.

Whenever it has been found practicable, through any or all the agencies indicated, to supply the omissions of the manufacturing returns, it has been done without regard to the amount of labor thereby devolved on the Census Office. Thousands of establishments have been added to the lists as the result of such inquiries. Whenever the manufacturing returns of any town or city have been found to be too grossly defective to be corrected by correspondence, a re-enumeration has been ordered, often with important results. The Census Office received valuable assistance in thus discovering and locating the omissions of the census in the woolen, cotton, paper, boot and shoe, leather and iron interests, from Messrs. R. W. Raymond, George William Bond, John L. Hayes, B. F. Nourse, C. O. Chapin, L. Blodget, Edward P. Bond, and Anton Eilers, gentlemen widely and honorably known for their connection with the practical or scientific parts of manufacturing industry in the United States; and, in respect to lesser branches of manufacture, or to the industry of individual localities, from a large number of gentlemen to whom the office has, from time to time, rendered acknowledgment.

The result of all these efforts has been to secure a degree of completeness, as proved by many and thorough tests, in the Manufacturing Statistics of the census, which surprises, as much as it gratifies, the Superintendent. Appreciating painfully the inadequacy of the machinery provided by law for this purpose, the Superintendent had anticipated being compelled, in candor and honesty, to make much larger admissions of error than, upon a careful review of the completed work, appears necessary. Whatever deficiencies local knowledge may detect in the following, will, it is believed, be amply excused, upon the explanations herein offered of the liability to omission on the part of assistant marshals, and the difficulty of applying a remedy at the Census Office.*

* The Superintendent desires to refer particularly to the note at the close of the present body of remarks, where will be found some very significant statements respecting the accuracy of the Manufacturing Statistics of the present census, so far as they relate to certain specific industries.

ACTUAL LOSS FROM THE TABLES OF MANUFACTURING PRODUCTION.

It has previously been admitted, in the course of these remarks, that omissions, in some trades very considerable, in some even portentous in extent, occur in the enumeration of the productive industry of the country, such omissions being due in some small measure to the liability to error which besets all statistical work conducted on a scale of any magnitude, but by far the larger portion being directly chargeable to the ill-advised provisions of the census act of 1850. The extent of these omissions in the most prominent instances, which happen also to be the instances where analysis is most easily and surely effected, has been previously shown. It is now proposed to inquire what is the aggregate amount of loss to the manufacturing production of the country through the failure of assistant marshals to reach all the establishments of productive industry lawfully and properly cognizable in the census. It must not be forgotten in this discussion that, while some trades, from peculiarities of industrial condition, are greatly understated in the census returns, the great majority of industries are known to be reported with substantial accuracy; while, in respect to a considerable number of industries, and those among the largest and most important, it can be demonstrated that the results reached by the census are of singular completeness and accuracy.

No attempt will be made to treat with anything approaching nicety of calculation the question, what is the aggregate amount of loss from the production of the country, through the omissions in the whole body of industries taken in the census. The conditions of the material do not allow of nice treatment, and it would be affectation to attempt fine distinctions or precise computations in dealing with the subject.

At once the most natural and most satisfactory means of testing the tables of manufactures is through the Tables of Occupations, when properly used and interpreted. Referring to the latter, we find the total number of persons engaged in manufacturing, mechanical, and mining industries, to be 2,707,421. From this number must be deducted 196,747, on account of persons engaged in mining, oil-boring, ice-cutting, quarrying, and fishing, (industries not represented in the Tables of Manufactures,) leaving 2,510,674 as the aggregate number with which comparison is to be made.

The tables of manufacturing industry account for the production of 2,053,996.

Increasing this number by 11 per cent., (the ratio used in the remarks prefacing the Tables of Occupations, as affording a fair general statement of the difference between a maximum and an average return of persons engaged in all branches of industry taken together,) we should have 2,279,936 persons accounted for by the Tables of Manufactures, against 2,510,674 by the Tables of Occupations. But a considerable further addition must be made on account of proprietors of establishments not working with their hands, and also on account of officials, clerks, and other persons connected with manufacturing industry in such a way as to be included under that head in the Tables of Occupations, but, by courtesy, not returned upon the schedule of manufactures as "Hands employed." The addition on this account cannot be reckoned at less than 75,000.* This would leave about 155,000 persons appearing under the general title of manufactures on the Occupation Tables, unaccounted for by the tables of productive industry. But the real loss is greater than this. Up to the present point in this discussion, the Tables of Occupations have been assumed to be authentic, and to present the true standard by which to criticise the Statistics of Manufactures; and, in respect to the adult male labor of the country, they are substantially complete and exact. But, in respect to the number of women and children employed in manufacturing industry, particularly in large mills and factories, the return of occupations is, for reasons to which attention was called in the remarks prefacing the Occupation Tables, decidedly deficient.† Thus, the latter tables show but 328,234 females, of sixteen years and upward, and but 70,735 children and youth, engaged in manufacturing industry: mining, quarrying, oil-boring, ice-cutting, and fishing being excluded, as is due. The Tables of Manufactures,‡ however, account for 323,770 females, of fifteen and upward, and 114,628 children and youth, employed in establishments of productive industry. Increas-

* The number of persons reporting themselves as "manufacturers" is 42,877. The addition of the other classes indicated would easily carry the total up to 75,000.

† The reasons why the Occupation Tables may be taken as substantially exact as they respect the adult male labor of the country, but not as they respect the employment of women and children, are plain and simple. It is taken for granted that every man has an occupation, and the examination of tens of thousands of pages of the schedules returned in the present census has satisfied the Superintendent that only in rare cases, too inconsiderable to be taken into account in such a discussion, have assistant marshals failed to ask and obtain the occupation of men, or boys old enough to work with effect. It is precisely the other way with women and young children. The assumption is, as the fact generally is, that they are not engaged in remunerative employments. Those who are so engaged constitute the exception, and it follows, from a plain principle of human nature, that assistant marshals will not unfrequently forget or neglect to ask the question.

‡ At this point there fails to be an exact correspondence between the two classes of tables in one particular. The number of males appears in each table according to the same divisions of age. The females, however, are divided on the one table as under and over fifteen years, respectively, and, on the other, as under and over sixteen years. The difference caused hereby is small, and it has not been thought best to take it into account in the remarks following.

ing these numbers by 11 per cent., as in similar cases heretofore, we shall have at the least 359,385 women, and 127,237 children and youth, engaged in manufactures, without reference to the members of these classes who may be engaged in establishments wholly omitted from the census.* Here, then, we have an excess, not in the Tables of Occupations over the Tables of Manufactures, as we have heretofore found, but in the latter over the former. Of course, this makes the deficiency of the Manufacturing Tables, in respect to the adult males engaged in manufactures, just so much greater.

Turning, then, to the figures given for the males above sixteen, engaged in manufactures, we find, practically, all the deficiencies of the manufacturing returns located here. The total number of males above sixteen is given at 1,615,598. Increasing this by 11 per cent., we have 1,793,314, against 2,111,705 of the same class appearing on the Tables of Occupations, (deduction of certain occupations being made as heretofore,) leaving a difference in round numbers of 318,000. From this should be deducted 75,000 (as previously explained) on account of manufacturers, officials, clerks, &c., not working with their hands, and to the remainder should be added something like 25 per cent. of the total number of persons reported in the Tables of Occupations as "laborers," without further specification, and therefore placed under the title of "Personal and professional services."†

This last would involve a clear addition of 257,000, making the total sum of persons fairly to be charged to the department of manufactures, yet not accounted for in the tables of production, in excess of 500,000. Of this number it has been shown that 430,000 are from the four trades of blacksmith, carpenter, cooper, and painter.

The remaining seventy to seventy-five thousand are distributed in very unequal proportions among the other trades, which are carried on in small shops, and also among the larger industries, of which individual establishments have been overlooked in the enumeration.

PROBABLE EXTENT OF LOSS.

On the basis of the foregoing computations and estimates, as to the number of artisans omitted from the tables of industry, the loss to the total value of production may be rudely calculated as follows:

First. If the 431,095 artisans belonging to the four trades of blacksmith, carpenter, cooper, and painter, who, according to previous estimates, were omitted from the tables of production, had produced three-fourths as much,‡ man for man, as the members of the same trades who are embraced in the tables, the addition to the gross product of the country, by their due return in the census, would have been $502,188,330, and the addition to the net product, $268,867,977.

Second. Assuming the aggregate number of persons of all other mechanical trades omitted from the tables of production to be 75,000, and assuming, further, that their average contribution to the gross and to the net product, respectively, of the country, was equal to three-fourths of that of the members of the fourth (mechanical and manufacturing) class, as the same is characterized on page 380 following, we should have a further addition to the gross product of the country of $104,576,898, and to the net product of $45,366,177, raising thus the gross product of manufacturing industry in the United States for the year ended May 31, 1870, to $4,839,090,670, and the net product to $2,058,132,354.

Enormous as these results appear, the Superintendent believes that they do not exaggerate the production of the United States, within the scope of the manufacturing schedule made a part of the act of 1850. Did that act provide agencies adequate to the thorough canvass of the manufacturing industry of the country, it is probable that the census of 1870 would have shown a gross product, exclusive of the mining and fishing industries, closely approaching $5,000,000,000.

In reference to all the foregoing statements of net production, it should, perhaps, be said that the results were obtained by deducting from the value of the gross product the value of the materials consumed. The difference is, therefore, not made up solely of the profits of manufacture, but includes also the items of wages, rent, freights, interest on capital, and such general expenses as are not properly to be included under the head of materials and supplies.

---

* The number of these is not very considerable. The industries which suffer the main omissions of the census are those which do not largely employ women and children.

† Road-building, the construction of railways, the excavation of canals, the digging of cellars, and the grading of grounds, none of which branches of industrial activity are reported in the census of industry, as taken in the United States, absorb the greater part. Agriculture, in its season, engages many who are yet not so steadily employed as to be known as agricultural laborers. Trade, especially in the neighborhood of commercial centers, and along lines of land and water transportation, requires the services of large numbers of this class. Twenty-five per cent. is probably high enough to include all those who are engaged in manufacturing industry.

‡ It is probable that the artisans omitted were, as a body, assisted somewhat less by steam and water power, worked at a lower rate of wages, and used, as a rule, somewhat less expensive materials than the artisans who are reported, the latter being, to a considerable extent, employed in large establishments, and these situated in cities and important towns.

THE PERIOD COVERED BY THE RETURNS.

It needs to be borne carefully in mind, in the use of the following tables, that the period covered by the returns is the twelve months from June 1, 1869, to May 31, 1870, inclusive. The fluctuations of productive industry are so incessant and so extensive, that it is necessary to fix precisely the period covered by any statement before tests can be applied to ascertain its completeness and accuracy. Especially in the United States, where these fluctuations are far greater than in older manufacturing countries, is it essential to observe this caution. It often happens that the comparison of two twelve-months periods having so many as ten or eleven months in common, will exhibit important differences caused by the eleventh or twelfth month, or both.

Thus, the months of July and August, 1869, witnessed a general dullness in the cotton manufacture of this country, while the same months of 1870 witnessed an increase of production over the average of the months preceding. It follows that the statements of the Cotton Manufacturers' Association, which, from the voluntary character of the service, might be expected to fall somewhat short of compassing the entire field of the industry, exhibit a consumption of raw cotton to the amount of 411,000,000 of pounds for the year covered by the returns of the association. being from September 1, 1869, to August 31, 1870; while the returns of the census, covering the period from June 1, 1869, to May 31, 1870, show a consumption of only 398,000,000, or 3.1 per cent. less than the amount shown by the former returns. Allowing for the few establishments not returning their product to the Cotton Manufacturers' Association, the actual difference of consumption caused by substituting certain months of 1869 for the corresponding months of 1870, was probably not less than 5 per cent.

The same explanation needs to be borne in mind, in criticising the statements in the following tables relative to certain important industries, which have grown with astonishing rapidity during the two or three years preceding the present date of writing, (October, 1872,) notably the manufactures of silk, flax, and of hemp goods, of railroad iron, and of Bessemer steel. One familiar with the present proportions of these branches of manufactures will, at the first glance, receive an unfavorable impression of the census statistics, from the report therein made of the production of these industries. Yet, if he will distinguish the period for which the returns of the census are made, and carry his recollection carefully back to the beginning and the ending of that period, he will probably assent to the general correctness of the statements in question. Of course, with the great majority of industries, the fluctuations from month to month are not so extensive, nor is the total growth of six months so rapid, as to make this caution of very great importance.

INCREASE IN MANUFACTURING PRODUCTION FOR 1860 AND 1870.

The gross value of the total product of manufacturing industry in the United States, at the census of 1860, was published at $1,885,861,676; the gross value of the total product of 1870 is here published at $4,232,325,442. Before, however, comparison can be made to determine how much of this apparent gain of $2,346,463,766 is due to the actual increase in manufacturing production, and how much to the mere enhancement of prices through the depreciation of the legal currency of the country, care must be taken to reduce the two statements as nearly as possible to the same form. Each statement, as published, includes elements that are not embraced in the other. Full account must be had of all such differences in scope.

The Manufacturing Tables of 1870, as has been previously noticed, exclude the industries of clover-hulling, cotton-ginning, cotton-picking and cleaning, grain-thrashing, ice-cutting, rectifying of liquors, and rice-cleaning. The total value of production under these heads, in the census of 1860, was $10,847,441. The value returned in 1870 was $65,753,323. The tables for 1870 also exclude all mining and quarrying industries. The total value of production reported under these several heads in 1870, was $152,598,994. This exclusion of mining industry from the production of 1870 is, however, in part compensated by the separation effected in the present publication between the mining and the milling of ores, and the inclusion of the milling part in the Tables of Manufactures. As this separation was not effected in 1860, it is impossible to say how much the gross product of that year was increased by the strictly mining part of these compound industries. Instead, therefore, of making a deduction from the product of 1860, as would be most natural, we add to the product of 1870 an amount equal to the aggregate product of all the branches of pure mining industry, *i. e.*, those like coal-mining, placer-gold mining, &c., in which no reduction of ores is necessary, and consequently the value of the ores is not repeated in the product of reduction-works. The value of stone, slate, and marble quarried must also be included. The aggregate amount added on these accounts is $93,876,683.

Again, the tables of 1870 include the product of butchering establishments, wherever butchering is carried on, not as an incident to merchant business, (as when a butcher, having a stall in a city market, or a small country

market of his own, kills for his own sales,) but as a separate industry, employing one or more hands habitually for the entire working-day. This element did not appear in the tables of 1860. The addition on this account to the production of 1870 is $13,686,061.

Allowance must also be made for the different treatment of one other industry, viz, cloth-printing, in the present publication, from that adopted at the Eighth Census. At 1860, the value of the cloth printed would appear not to have been embraced, either in the value of materials or in the value of product; but, in the former, only the value of mill-supplies, coloring-matter, &c., and, in the latter, the value added to the goods by printing. At the present census, it has been thought best to include the value of the cloth in the statement both of materials and of product. By this means the net value created by the industry is as closely obtained as by the other method, while just so much additional information is given. Indeed, there seems to be no reason for making this one industry an exception to the entire list of kindred industries in this particular. The fact that the value of materials here becomes unusually great, as compared with the value to be added by the processes of printing, certainly constitutes no difference in principle as between this industry and any other. If the subject-matter of the industrial process is to be included in the account, when it amounts to three-fourths of the value of the ultimate product, there seems to be no good reason for excluding it, because it reaches five-sixths of that value.

The addition caused to the aggregate value of manufacturing production, by the different treatment of this industry in the compilations of the Ninth Census, is $37,587,517.

Still further allowance must be made on account of the fuller return of the production of certain minor trades which have been repeatedly mentioned in the course of these remarks—blacksmithing, carpentering, coopering, painting, plumbing, plastering. These trades have not increased in the ten years in any such ratio as would appear by comparison of the number of establishments, or the number of hands employed at the two censuses. They have probably not increased in a ratio exceeding the ratio of increase in population, viz, 22½ per cent. If 30 per cent. be allowed, it will be all that could reasonably be claimed.

The difference between these industries, as returned in 1860, after being increased in this ratio, and the same as returned in 1870, is due to a more general and thorough return of these branches of mechanical industry, from causes previously noted, and not to the manufacturing growth of the country. In order, therefore, to a just comparison between 1860 and 1870, allowance must be made to the extent of this difference in favor of 1860, or, more properly, a deduction to that extent made from the aggregate product of 1870. The two censuses will then be on an equal footing in this particular.

Still another element remains to be treated before the results of the two censuses can be placed justly in comparison, to determine the increase in the value of production. Have any administrative measures special to the Ninth Census tended to increase the return of production, irrespective of any corresponding actual increase in production?

Allusion has heretofore been made in these remarks to special efforts, both through an extensive correspondence and through the re-enumeration of certain towns and cities, to supply the deficiencies existing in the returns of manufacturing industry, first rendered to the Census Office. Without asserting or assuming that no measures of the first kind were undertaken at the Eighth Census, the Superintendent is fully convinced that the extent to which these efforts have been carried at the Ninth Census has resulted in an addition to the gross product of the country vastly in excess of the amount so added in 1860. The re-enumerations of manufacturing industry in Philadelphia, Saint Louis, Chicago, and Indianapolis, alone, increased the gross product of these cities by $200,000,000. In addition to these, and other cities and towns, which were either wholly or partially re-enumerated in the interest of the Statistics of Manufactures, many important industries were canvassed throughout the whole extent of country covered by them, and many millions added by that means. The Superintendent cannot estimate the increase from these causes (exclusive now of the more general return of the minor trades previously taken into account) at less than 6 per cent. of the gross product, say, in round numbers, $250,000,000.

Upon the basis of the foregoing computations and estimates, the true statement of account as between the manufacturing product of 1860 and that of 1870 is exhibited in the following table:

Total production of the United States, 1870, as reported		$4,232,325,442
Add on account of cotton-ginning, &c	$65,753,323	
Mining, pure	82,016,061	
Quarrying	11,860,622	
Fisheries	11,096,522	
		170,726,528
		4,403,051,970

Deduct on account of butchering	$13,686,061	
Value of cloth printed	36,838,007	
Increase in reported production of carpenters, coopers, &c	177,569,242	
Increase due to special administrative measures	250,000,000	
		478,093,310
		3,924,958,660
Total production of the United States, 1860, as published		1,885,861,676
		2,039,096,984

Increase, per cent., 108, (exactly 108.12.)

It will be observed that the results reached do not purport to exhibit the true value of the manufacturing production of the country either at 1860 or at 1870, but merely to exhibit the statements of the two censuses, reduced to equal terms, as respects the inclusion or exclusion of certain industries, the administrative treatment of other industries common to both, and even the degree of error believed to exist in each. The object has been simply to obtain a fair and probable statement of the ratio of increase, *ceteris paribus*, from 1860 to 1870, prior to the consideration of the question what portion of that increase is due to enhancement of prices, and what to actual industrial growth. The ratio thus arrived at the Superintendent believes to be approximately correct; that is, if the reported gross product, $1,885,861,676, at 1860, had been correct, (as it manifestly was not,) about 3,925 millions of dollars would have been the true expression for the gross product of 1870. On the other hand, were the reported gross product of 1870, $4,232,325,442, correct, (and it is manifestly below the facts of the case,) about 2,030 millions of dollars would have been a just statement of the product of 1860. If, again, the product of 1870 were to be increased (as it clearly ought) by a sum exceeding $600,000,000* on account of the omissions and deficiencies which have been previously noted, the product of 1860 would stand at about 2,325 millions of dollars, while the product of 1870 reached $4,839,090,670.

The Manufacturing Statistics of the Eighth and the Ninth Censuses having thus been reduced to equal terms, there would appear to have been realized in the ten years intervening an increase in the value of the product to the extent of 108 per cent.

The question now arising is: How much of this increase is due to the general increase of prices; how much to actual increase of production? In computing the increase in the reported value of the manufacturing production of the country, due solely to an enhancement of prices, through currency inflation or other general causes, consideration requires to be had, not only of the separate ratio of increase in prices within each important industry and group of industries, but also of the amount produced under each such increased ratio, in order that a true average may be obtained.

After much thought and extensive inquiry on the subject, and the application of numerous tests, the Superintendent is disposed to regard 56 per cent. as a just statement of the increase in price for all classes of mechanical and manufacturing productions between 1860 and 1870; that is, that manufactured articles of the same quality, (averaging all branches of production,) which would have been $1,000,000,000 in 1860, would have been worth $1,560,000,000 in 1870. This would leave the increase of manufacturing production in the ten years to be represented by 52 per cent.

RELATION OF MATERIALS TO PRODUCT.

The relation of materials to product, in the Statistics of Industry, needs to be carefully borne in mind; otherwise the most mistaken views of the importance of the several branches of industry will result.

The manufacturing, mechanical, mining, and fishing industries may be grouped in respect of the value of materials into five classes:

First. Those industries in which the subject-matter of labor is taken as of no value, and the value of the "materials" reported is made up of the mechanical and chemical appliances with which that subject-matter is treated. This is true of pretty much the entire body of mining and fishing industries. The ores in the rock or in the soil, the fish in the sea, are taken, and properly so, as of no value for the purposes of these statistics. The royalty paid to the owner of the mine in the one case, the license taken out by the fisherman in the other, are not included in the value of materials. In some cases the appliances, chemical or mechanical, are of the simplest kind, and are consumed in very small quantities; in others, they become very extensive and costly; but, through all this

* $606,765,228.

class, it remains true, as a rule, that it is labor, and the risk and use of capital, which make up the chief cost of production.

Second. Those industries in which the subject-matter is of a distinct and immediate commercial value, but the property does not reside in the person who treats it. In these cases, still, the value of the subject-matter treated is not embraced in the return of materials. A familiar illustration is that of horse-shoeing. It would be the height of absurdity for the smith, for example, to return the value of unshod horses among his "materials," and the value of the same, when shod, in his product. The census assigns as the materials of his industry, merely the coal, iron, steel, &c., used, and, as the value of his product, merely the price of the personal service he renders, plus the cost of those materials. In the same category are many of the trades. The returns in respect to the industries of painting, plastering, and plumbing, for example, do not take into account the value of the houses, stores, factories, &c., before and after these operations, but regard only the added value given as the product, and, in the same way, only the paints, the plaster and lime, the tubing, iron, and brass-ware, &c., used, as the "materials" of these industries.

Third. Those industries in which the entire value of the subject-matter is carried into the value of "materials," and appears again in the product enhanced by the value of labor, by the charges for the use of capital, for rent, freight, &c.; but in which the value of such subject-matter is small, compared to the cost of labor. The cabinet-maker takes a few dollars' worth of woods, coarse or fine, and works this material up into articles bearing ten times the value. The cutler takes a few pounds of steel, and produces edged or pointed instruments of high cost, because of the time and skill required in their fabrication. In all these cases the value of the product is not greatly enhanced by the fact that the entire subject-matter of the industry is included.

Fourth. Industries which are otherwise under the same conditions as those of the third class, but in which the value of the materials approaches, or even moderately exceeds, the value of the labor employed, and becomes thus an important element in the final value of the product as reported, enhancing the apparent production of the industry in a high degree. Here come in the great body of the industries known technically as the "manufactures" of the country, the mill and factory industries, whose productions appear oftentimes enormous, as compared with those of bodies of craftsmen more skilled, and receiving higher wages, and do so merely because of the high cost of the materials consumed in the former case.

Fifth. Industries in which the value of the materials far exceeds all the other elements in the cost of production combined, and thus carries up the apparent product of these industries to a very high point, although, in fact, comparatively little value has been added by these operations, and only a small number of artisans or laborers supported.

The reduction of gold and silver, calico-printing, bleaching and dyeing, the currying of leather, the packing of meat, the refining of sugar and molasses, and the production of flour and meal, are among the most important industries of this class.

The distribution of the industries embraced in Table VIII (B,) as nearly as possible, according to the classification just indicated,* yields the following instructive results:

Relation of Wages and Materials to Product in Manufacturing, Mechanical, Mining, and Fishing industry.

CLASS.	Number of hands.	Amount of wages.	Amount of materials.	Amount of product.	Excess of product over materials.	Excess of product over wages and materials.	Dollars of wages in $100 of product.	Dollars of materials in $100 of product.	Dollars of wages and materials in $100 of product.	Product per capita, gross.	Product per capita, deducting materials.
I	169,691	$73,438,952	$14,418,908	$143,136,692	$128,717,784	$55,278,832	$51.30	$10.07	$61.37	$843.51	$758.54
II	110,504	35,689,883	67,850,482	154,692,177	86,841,695	51,151,812	23.07	43.86	66.93	1,400.00	785.87
III	388,924	167,118,533	183,543,034	535,487,704	351,944,670	184,826,137	31.20	34.28	65.48	1,376.84	904.92
IV	1,453,056	541,078,362	1,529,537,058	2,701,440,948	1,171,903,890	630,825,528	20.29	56.62	76 91	1,859.10	806.51
V	101,504	31,734,815	707,361,378	841,005,063	133,643,685	101,908,870	3.77	84.10	87.87	8,285.44	1,316.64
	2,223,679	849,060,545	2,502,710,860	4,375,762,584	1,873,051,724	1,023,991,179	19,40	57.19	76.59	1,967.80	842.32

* Two common trades, each of which belongs partly to the second and partly to some other class, were divided for this purpose, in such proportions as seemed due. All the other industries in Table VIII (B,) were assigned entire to one class or another, according to the principles indicated in the text. The lines of division taken for the third, fourth, and fifth classes were, 1st, where the value of the materials is less than two-fifths of that of the ultimate product; 2d, where the value of the materials is from two-fifths to four-fifths of that of the ultimate product; and, 3d, where the value of the materials is over four-fifths of that of the ultimate product.

Examination of this table shows that the first class of industries, with a reported gross product of $143,000,000, yields a net product only $5,000,000 less than that of the fifth class, which has a gross product of $841,000,000, while the wages paid in the first class exceed those paid in the fifth by 131 per cent. Nothing, perhaps, could set in a stronger light the necessity of considering all statements of manufacturing production in connection with the value of materials consumed and the cost of labor. Here are two groups of industries, the one reaching the gigantic total of $841,000,000, the other aggregating but one-sixth as much; yet, the latter makes a clear addition to the wealth of the country equal to 96 per cent. of the net production of the former, and actually pays more than twice as much in wages.

The calculations which have been added to show the number of dollars' worth of wages and of materials, separately and combined, in each hundred dollars of product, and also the average value of production, gross and net, to each hand employed, are well worth studying.

It appears that the value of the materials consumed in the several groups of industries range from $10.07 to $84.10 in each $100 of product; that the amount of wages ranges (going, so to speak, in the opposite direction) from $51.30 to $3.77 in each $100 of product, while the gross product per capita ranges from $843.51 to $8,285.44, and the net product ranges from $758.54 to $1,316.64. The reason for these astonishing differences is not found chiefly in any difference in the quality of labor, or in the more extensive application of machinery in one class than in another, but, almost wholly, in the treatment of this subject of the materials consumed in the successive industries and classes of industries.

THE RELATION OF WAGES TO PRODUCT.

In reference to certain of the common trades, it needs to be stated, in explanation, that the apparently inadequate amount of wages reported is due to the fact that a very large body of labor is included which is not represented in the wages column. Thus, the statistics of carpentering show that, for a total production of $132,901,432, (the value of materials being $65,943,115,) the amount of wages paid was only $29,169,588. The consideration above noted is sufficient to account for the seeming deficiency, inasmuch as the labor of proprietors of establishments in this line (certainly not less than 17,142, and probably rising to twenty thousand) was compensated, not out of the wages paid, but out of the profits of the business. In some branches of industry the number of "hired hands" is even less than the number of artisans working in their own shops, and, hence, receiving no wages, but living off the profits of manufacture.

CAPITAL INVESTED IN MANUFACTURES.

The census returns of capital invested in manufactures are entirely untrustworthy and delusive. The inquiry is one of which it is not too much to say, that it ought never to be embraced in the schedules of the census; not merely for the reason that the results are, and must remain, wholly worthless, the inquiry occupying upon the schedules the place of some technical question which might be made to yield information of great value, but, also, because the inquiry in respect to capital creates more prejudice and arouses more opposition to the progress of the enumeration than all the other inquiries of the manufacturing schedule united. It is, in fact, the one question which manufacturers resent as needlessly obtrusive, while, at the same time, it is perhaps the one question in respect to their business which manufacturers, certainly the majority of them, could not answer to their own satisfaction, even if disposed. No man in business knows what he is worth—far less can say what portion of his estate is to be treated as capital. With respect, indeed, to corporations having a determinate capital stock, the difficulty of making a correct return in this particular becomes very much reduced; yet, even here, the difference caused by returning such capital stock at its nominal value on the one hand, or at its actual selling-price on the other, whether above or below par, might easily make a difference of 50 or 75 per cent. in the aggregate amount of capital stated for any branch of industry.

Where, however, business is carried on outside of incorporated companies, the difficulty of obtaining even an approximate return of capital, resulting from the nature of the inquiry itself, irrespective of the reluctance of manufacturers, becomes such as to render success hopeless. So numerous are the constructions, possible and even reasonable, in respect to what constitutes manufacturing capital, that anything like harmony or consistency of treatment is not to be expected of a large body of officials pursuing their work independently of each other. The Superintendent is free to confess that he would be puzzled to furnish a definition (fit for practical use by enumerators) of manufacturing capital, or, even in a single case, with complete access to the books of a manufacturing establishment conducted by two or more partners, and with the frankest exhibit of the assets, both of the firm and of the individuals thereof, to make up a statement of the capital of the concern, in respect to which he would feel any

assurance. When to such difficulties in the nature of the subject is added the reluctance of manufacturers to answer an inquiry of this character, it may fairly be assumed, in advance of any enumerations, that the results will be of the slightest possible value.

It is greatly to be regretted that the census should be incumbered by an inquiry yielding so little, yet provoking so much opposition to the progress of the general work.

The aggregate amount of capital invested in manufactures in the United States, as by the following tables, is $2,118,208,769. It is doubtful whether this sum represents one-fourth of the capital actually contributing to the annual gross product of $4,232,325,442.

It is a pity, and may almost be said to be a shame, that statistical information, in many respects, of high authority and accuracy, should be discredited by association with statements so flagrantly false, even to the least critical eye; yet, as the manufacturing schedule annexed to the act of 1850 requires this return, and as there is a vague popular notion that the statement of capital in this connection is of real and great importance, (instead of being, as it is, at the best, of the least consequence,) the Superintendent does not feel at liberty to withhold the results from publication; but he feels not only authorized but required by the facts of the case to brand them as he has here done, in order that no one may be deceived by the show of authority they present.

ESTABLISHMENTS CARRYING ON TWO OR MORE DISTINCT INDUSTRIES.

One of the first difficulties encountered in the compilation of Industrial Statistics is found in the fact, that in the same establishment are frequently carried on two or more industrial processes which are distinct in idea, and, in general practice, are separately pursued. At once the most familiar and the most important of the industries thus sometimes separated, and, in other cases, united under one management, are the tanning and the currying of leather. Each of these is a distinct and complete industry, and the members of each, whether employers or workmen, have important occasion to use the statistics, separate and entire, of their trade. Yet the two are, in hundreds of cases within the United States, carried on upon the same capital, under a single management, and without a separate account being kept of the expense or the profits of each part of the joint industry. In such cases the value of the materials consumed, as returned in the census, includes the value of the untanned hides, while the cost of the product embraces the selling-price of the curried leather.

In the embarrassment caused by this state of things, three modes of procedure are possible:

First. To report separately the number of establishments tanning leather, the number of establishments currying leather, and the number of establishments both tanning and currying leather.

Second. To aggregate all the three classes of establishments indicated above, and publish the gross number of establishments carrying on the manufacture of leather. This was the method pursued in the publication of the Statistics of Manufacturing Industry at the Eighth Census, 1860.

Third. To effect a separation, exact and by transcript, from actual accounts when possible, arbitrary and approximate when necessary, between the two kinds of work done in the third class of establishments described; and, after such separation, to add to each of the other classes that which by such analysis is found to belong to it; thus recognizing in the publication only the first two classes of establishments, and publishing each as complete and as distinct.

The objection to the first of these methods is, that it requires every person who has occasion to make use of the statistics of either of these industries to make for himself nice and difficult computations, for which he may have neither time nor technical knowledge.

The objection to the second method is, that it yields a positively false result as to the value, both of the gross and of the net production of the joint industry thus presented. In illustration of this, the statistics of a single county for 1870 will suffice.

From Middlesex County, Massachusetts, there were returned at the Ninth Census three establishments tanning leather; cost of materials, $247,200; value of product, $287,400; twenty establishments currying leather; cost of materials, $1,081,718; value of product, $1,443,473; and sixteen establishments, doing both tanning and currying; cost of materials, $2,224,300; value of product, $3,521,155. According to the method under discussion, which was the method adopted in the publications of the Eighth Census, these three classes of establishments would be added together, yielding the following result: Number of establishments *manufacturing leather*, 39; aggregate cost of materials, $3,553,218; aggregate value of product, $5,252,028.

Now, in the statement of the leather industry of Middlesex County, thus obtained, it is evident at a glance that only one element, viz, the number of establishments, is correctly given. The other two, by far the most important, are erroneously stated. Both of the "cost of materials" and of the "value of product," it must be said

that each should be very much less, or else very much greater. If the cost, both of untanned hides and of uncurried leather, and, again, the value both of the hides, when tanned, and of the leather, when curried, are to be included in the one case, the same elements should be included in the other. If excluded in one case, they should be in both.

The actual treatment of these establishments in preparing for the present publication was as follows: The sixteen establishments which were returned as doing both tanning and currying, were divided as sixteen establishments tanning leather and sixteen establishments currying leather; the wages, labor, materials, product, &c., were divided between the two processes, according to formulæ obtained for the purpose from "the trade," and the three classes were thus reduced to two, with the following result: Nineteen establishments tanning leather; cost of materials, $2,396,350; value of product, $2,999,541; thirty-six establishments currying leather; cost of materials, $3,878,026; value of product, $5,033,028. Total number of establishments engaged in manufacture of leather, fifty-five; aggregate cost of materials, $6,274,376; aggregate value of product, $8,032,569.

It will be evident to any one who will consider the reasons above presented, that of the three elements here given, the first is not correctly stated, being exaggerated by the number of establishments doing a complex business; but that the remaining two elements, which are of far greater importance for statistical purposes, are substantially correct, and that they could not be made even approximately correct by any other course of treatment.

The one objection which can be urged against this method, which is the method adopted for the present publication, is, that it exaggerates the number of establishments of productive industry, to the extent of the "separations" thus effected. This objection is fully met by the use of tables of duplications which correct the excess thus occasioned, and reduce the number of establishments of productive industry to the exact facts of the case.

The tables of duplications, by States and Territories, and also by counties of the same, will be found at the end of these remarks.

There are a few cases of duplication not embraced in these tables, where the union of two industrial operations beneath one roof, or under a single management, or by virtue of their common use of steam or water power, is so clearly accidental and arbitrary, that no notice has been taken of the duplication. For example, where a mill is returned as a "grist and saw mill," there has been no hesitation in separating the two parts of the business, and assigning each to its appropriate place in the Statistics of Industries. The fact that the power for the two operations is furnished by the same wheel is not regarded as sufficient to create a community of industrial character, even to the extent of requiring a record of the separations thus effected.

MINING AND THE FISHERIES.

The following tables do not embrace the Statistics of the Mining or the Fishing Industry of the country, both of which, in 1860, were included in the Manufacturing Statistics of the Census, but which, in the present publication, will be found presented in separate and independent tables. The reason for this innovation is three-fold:

First, because these industries are, in theory and in their practical relations, essentially distinct. Indeed, the occupation of the fisherman partakes more of the nature either of commerce or of agriculture than of manufactures.

The occupation of the miner is not so much unlike that of the artisan; yet writers on political economy have been quite generally disposed to hold that, if the occupations of mining and fishing are to be assigned to any one of the three grand divisions of industry which have been indicated, it should be to agriculture, as dealing in the spontaneous products of the earth and the sea, and also as furnishing material, in the earliest forms, for subsequent processes of industry.

Second, for convenience of reference and citation. The Statistics of Mining or Fishing Industry occupy so little space, comparatively, as not to be easily found, upon occasion, in voluminous tables of manufactures.

Third, because the Statistics of Mining and Fishing Industry in the United States, with the present modes of collection, are so distressingly inadequate to the known facts of the case, that their admission to the Tables of Manufacturing Industry amounts to a positive disparagement of the latter. The Statistics of Manufactures have their own faults, as is elsewhere frankly acknowledged, under the present census system of the United States; but they are incomparably more complete and accurate than any Statistics of Mining or Fishing Industry to be obtained by existing machinery. To merge them with matter so defective is, in a degree, to subject them to the same discredit. A separation, therefore, is on all accounts desirable.

In effecting this separation, however, in respect to mining industry, a difficulty is encountered, which, to be sure, ought none the less to be provided against in tables where the two industries appear indiscriminately, but which, in such a publication, is easily covered up, or, indeed, may escape the observation both of reader and compiler.

This difficulty is found in the fact that the mining of ores and the subsequent working of them are frequently and even generally carried on by the same individual, firm, or corporation, and without distinction, upon the returns of the census, as to the amount of capital invested in each, or the division of the aggregate labor of the establishment between the two processes. If, therefore, Mining and Manufacturing Statistics are to be "lumped," it is easy to find a common term for the aggregate figures of the complex industry, and publish them so. But if a separation between mining and manufacturing is to be effected, the part of each in this complex industry must be carried to its credit, and, in order to this, the part of each must be first determined, a task of no slight difficulty.

In preparation for the present publication, the same attempt at resolving clearly diverse elements has been made in respect to the complex industry of mining and reducing ores, whether of gold, of silver, of copper, of lead, or of iron, as was made (and heretofore described) in respect to complex industries like the tanning and currying of leather, or the conduct of furnace and foundery business in a single establishment, where both parts or processes belonged, indisputably, under the one head of manufactures.

In the present case this separation has been effected by much the same method as was pursued in the former, viz, by correspondence with the proprietors of establishments, so far as they were disposed to afford the information, or the Census Office had the clerical force to require it; and, in the remaining cases, by an analysis somewhat arbitrary in form, but conducted according to carefully obtained and approved formulæ, at the Census Office. As a result, the mining and the reducing of ores have been presented each distinct and in its entirety, (subject to the inevitable deductions on account of the incompleteness of the enumeration, as performed by assistant marshals,) the former under the appropriate head of mining industry, the latter as a part of the manufacturing industry of the country.

GOLD AND SILVER PRODUCT.

For an explanation of deficiencies existing in the report of the product of gold and silver reduction works, in the Mining Tables, reference is, for economy of space, made to the remarks in respect to the return of the gold and silver mining industry, to be found among the remarks which preface the General and Special Tables of Mining.

The deficiencies in the *milling* of the precious metals are not as great as in respect to the *mining* of them, inasmuch as the largest loss from the returns is in respect to placer mining, that form of industry being pursued under conditions less favorable than quartz or hydraulic mining to an accurate report in the census. The deficiencies in the statistics of the milling of the precious metals are, however, serious and frankly admitted. The reason for this substantial failure of the census to collect the statistics of the gold and silver product, either in the ore or upon reduction and assay, is explained in the remarks to which reference is made just above.

QUARRYING AND PEAT-CUTTING.

Both the convenience of publication and the reason of the case require that the statistics of stone, slate, and marble quarrying should be grouped with the Statistics of the Mining Industries. There is, indeed, no distinction in fact or in idea which would justify a separate treatment. The cutting of peat also clearly belongs with the mining industries, and the few instances in which it has been returned in the census have been noted in the Mining Tables.

DEFECTS OF THE CENSUS LAW.

The Tables of Manufacturing Industry probably show more clearly than any other conspicuous portion of these volumes the importance of additional legislation in respect to the census. The industry of the United States has now attained to such dimensions, and has come to embrace so diversified and complicated interests, as to require peremptorily a system of statistical investigations substantially new, both as to the scope and the details of inquiry, and as to the methods and agencies of enumeration. Outgrown and ineffective as is the census law of 1850 in almost all particulars, it is nowhere so painfully and almost ludicrously inadequate as in the canvass of the national industry.

Of the total amount paid for the collection of the Statistics of Manufacture in "Schedule 4," more than a fifth was expended for returns relating to carpentering, blacksmithing, coopering, painting, plastering, and plumbing, not one of which industries, though far better returned than ever before, was reported with sufficient completeness even to furnish the data for a computation of the true production of the trade, so that, after this expenditure, one is still obliged to resort to the Tables of Occupations for the material from which to estimate the production of this group of industries. The money thus thrown away would have served, if placed under the control of the Department of the Interior for the salaries of experts and for the traveling expenses of special agents, to make the statistics of the larger industries complete and correct in the highest attainable degree, creditable to the census as a national work,

and invaluable to the statesman, the politieal eeonomist, and the praetieal man of business. At the same time, a well-trained statistieian ean, in a few hours, from the Tables of Oeeupations, reaeh a far more satisfaetory result in respect to the produets of the minor trades than is to be obtained by manipulating the partial returns of the trades themselves. In a word, the returns of manufaetures should be restrieted to those industries whieh are earried on in eonsiderable establishments, and are susceptible of a thorough, eomplete, and detailed enumeration.

Seeond. The returns of manufaetures, having been thus restrieted, should be far more speeifie, and should be made to eonform to the advanee in the praetieal arts within the last twenty years and to the requirements of modern statistieal science. The additional faets thus to be elieited should not be industrial merely, but sueh also as are of soeial and sanitary importanee. The Manufaeturing Tables of the census ought to be so full of teehnieal information as to beeomé the hand-book of manufacturers, while, at the same time, they might be made so pregnant with truths important to the eeonomist and the statesman as to beeome a hand-book of soeial and politieal philosophy. With no more authority of law than might have been eontained in five lines of the statutes, and with not a dollar of expense above what has been ineurred in making this unsatisfaetory exhibit of the national industries, sueh an enumeration of the manufaetures of the eountry might have been effeeted at the Ninth Census.

Third. The enumeration of all the manufaeturing industries which are of sufficient importanee to be taken at all in the eensus, should be eharged upon speeial agents or deputies, who should be in the widest sense experts, who should be liberally eompensated; who should have ample authority to proseeute the stated inquiries of the census; and each of whom should be assigned to the enumeration of a single specifie industry, or of a limited number of eognate industries, over a large extent of territory. To reduee the subjeets of inquiry given each sueh agent, while extending his field of inquiry over entire eities, States, and sections, affords the true means of seeuring at once eloseness of scrutiny and eomprehensiveness of survey.

Fourth. The eanvass of manufaeturing industries should be eondueted through means of schedules, speeial sueeessively to eaeh of the industries to be enumerated. This is demanded, not less for the eonvenienee of the public than in the interest of the eensus itself, in order to aeeuraey and eeonomy of enumeration.

At the eensus of 1860, the return of "kinds and quantities," both of materials and of produets, required by the aet of 1850, was enforeed more or less eompletely in respeet to eaeh one of the 140,433 establishments enumerated;* while, in the ease of only 6,336 establishments, (excluding, as in 1870, eoal and iron mines,) were the returns of "kinds and quantities" tabulated. At the eensus of 1870, in the manifest uselessness and, indeed, impraetieability of returning the kinds and quantities of materials or produets in a form allowing of a systematie tabulation, the instruetions to assistant marshals were so drawn as to exeuse from this duty the proprietors of at least 115,000 establishments of productive industry. 85,042 are published in one of the following tables, with the kinds and quantities of materials and produets stated in detail. In respect to the remainder, the returns of "kinds and quantities" were not used, either from the inadequaey or irregularity of the statements made, or beeause the materials and produets were found, upon an attempt at eompilation, not to be of a eharaeter to repay the expense of tabulation, or to justify the spaee required in publication.

To increase the ratio of establishments in respect of which quantitative statements of materials and of produets are supplied in the eensus, from 4½ per eent., as in 1860, to 34 per cent., as in 1870, may fairly be claimed as a marked sueeess. But, to effeet this objeet, an amount of clerical labor has been expended which has been simply enormous. Tens of thousands of letters from the Census Offiee were required to obtain the material for eomplete and comparative statements of produetion for the trades and branehes of industry whieh are embraeed in Table X, following.

The fatal defeet of the "general blank" in this partieular is, that each proprietor of establishment is left to fill out the columns, "kinds," "quantities," "values," twiee—onee for materials and once for produets—according to his own judgment or inclination.

He has no idea how much particularity is desired, or how fully his neighbors and rivals in business will report their operations. If he really wishes to comply with the intentions of the law, he is at a loss to decide as to the best method of classifying the materials and produets of his industry. The determination of this question, which is a matter for careful consideration by the best-informed statisticians, is thrown by turns upon eaeh one of 250,000 manufacturers. No reasonable number of precise and specific questions could cause one-half the trouble which is involved in filling these six columns of the general schedule of manufactures. A similar difficulty, though not proceeding to the same degree, is found in the return of power and machinery upon the general schedule.

*Exception must be made to the extent of 5,000 gold mines, in the State of California, which were estimated for at the Census Office.

The result of all this is, that some manufacturers, out of conscientiousness, or from a real interest in securing a complete and correct census of their industry, will make their answers even more full and explicit than is necessary; while others will put in as little as possible, disregarding, perhaps, the plainest and most natural divisions between the classes of products and materials. Each man's inclinations are thus made the measure of his duty, and uniformity of practice becomes impossible. Where there is no uniformity of practice, there can be no comparison and no tabulation of results. The alternative presented to the Census Office by returns of industry so irregular and confused, is either to drop the whole and accept the failure of the effort to obtain specific information of the highest economical and social value, or else, by a most extensive, laborious, and thankless correspondence, to elicit the information which would have been given as a matter of course, and without extra trouble to any one, on schedules specially adapted to the industries in the enumeration of which they were to be used.

For all this uncertainty, vexation, and confusion to enumerator, enumerated, and compiler, the special schedule offers a clear and easy remedy, substituting for the diverse judgments and inclinations of a thousand manufacturers a single straight rule by which all can govern themselves, knowing that they are doing all that will be required of them; a rule, too, which, by making compilation a mere work of transcription, would save ten or twenty times more in clerical service than the trifling additional cost of printing involved.

THE STATISTICS OF THE COTTON MANUFACTURE.

The following communication from B. F. Nourse, esq., of Boston, a writer of high authority on both the production and the manufacture of cotton, indicates the degree of success attained in the census statistics of the cotton manufacture.

"BOSTON, *September 5*, 1872.

"Accept my thanks for the gratification afforded by an examination of the sheet containing the statistics of the cotton manufacture for the census of 1870.

"I was surprised as well as gratified to note the results or footings in the census returns, so closely corresponding with the results obtained by our association for the same year. Obtained through different channels, their agreement is strong proof that both are correct. It is certainly true that, in the item of cotton manufactures, in its subdivisions of the number of spindles, the quantity of cotton consumed, and the weight of the goods produced, this census is substantially, if not exactly, correct, and, from the comparison with our statistics for 1870, as well as from information obtained by persistent demands, repeated until complied with, for exact returns from every mill, it is fair to infer that this portion of the census has the highest attainable accuracy. It is in remarkable contrast with every previous census since the cotton manufacture became one of the important industries of the country.

"If, in other industries, and other departments of production, the same degree of accuracy has been attained as in respect of the cotton manufacture, and the production of cotton (raw) for the year prior to June 30, 1870, then is this census worthy of the confidence of statesmen, political economists, and men of business.

* * * * * * * * *

"B. F. NOURSE."

The following, from E. P. Bond, esq.. of Boston, exhibits the result of certain critical tests applied the same statistics. No one familiar with such investigations can fail to appreciate the singular accuracy which the analysis shows to exist in the census tables of this industry:

"We find the tables in all essentials corroborated by the cotton association returns for 1870, and wonderfully consistent with themselves. Thus, you report 7,132,000 spindles; we, 7,114,000. You, 398,000,000 pounds cotton used, and we, 411,000,000. The difference here is explained by the fact that your year included July and August, 1869, when the mills were running short, and ours, the same months of 1870, when they were running full. You report as gross weight of cotton used ..... 398,000,000 pounds.
Deduct for waste, 16 per cent., which is the allowance made in the association report for 1870, and generally accepted by manufacturers ..... 63,680,000 pounds.

And the total product would be		334,320,000 pounds.
You report, however, a product of		349,000,000 pounds.
And there is an apparent excess of		14,680,000 pounds.
But, to offset this, there is—		
Amount of waste included in product	8,000,000	
One-half amount of cordage, lines, and twines	2,500,000	
One-third amount of batts, wicking, and wadding	4,000,000	
		14,500,000 pounds.

"Showing an actual discrepancy of (about $\frac{5}{100}$ of one per cent.) 180,000 pounds."

* * * * * * * *

THE STATISTICS OF THE WOOLEN MANUFACTURE.

George William Bond, esquire, of Boston, an acknowledged authority in respect to the production of wool and the manufacture of woolen goods, writes the Census Office as follows, under date of July 6, 1872:

* * * * "The result of tabulating and analyzing the returns of the census of woolen manufactures is to give me great confidence in the general accuracy of the same. The different parts prove each other. The average capacity of the mills in the several sections is about what I should expect to find it. The consumption of wool and other textile fibers is about two-thirds of the full capacity of the mills, and its accuracy is well borne out by the quantity of goods manufactured."

* The separation of distinct industrial processes carried on under a common ownership made one fictitious establishment for every case of duplication, two for every case of triplication, three for every case of quadruplication.

NUMBER OF ESTABLISHMENTS IN SPECIFIED INDUSTRIES WHICH WERE DUPLICATED.

All industries.	Agricultural implements; and iron, rolled, bar, and sheet.	Agricultural implements; and iron, castings.	Agricultural implements; and iron, rolled.	Agricultural implements and machinery.	Agricultural implements and stoves.	Cider and liquors, distilled.	Cotton goods; and wool, carded.	Cotton goods and woolen goods.	Iron, bar, sheet, and rod; iron, blooms.	Iron, bar; and iron, pigs.	Iron, bridges; machinery.	Iron, forged; and iron, blooms.	Iron, pigs; iron, rolled, bar, and plate.	Iron, pigs; and machinery, engines.	Iron, pigs; and iron, blooms.	Iron, pigs; and nails and spikes.	Iron, railroad chairs, and railroad spikes.	Iron railing, wrought; and safes, fire-proof.	Iron, rolled; and iron, blooms.	Iron, rolled; and iron, nails, spikes and rivets.	Iron, castings; and iron, anchors.	Iron, castings; and brass founding.	Iron, castings; and iron, blooms.	Iron, castings; and cars, railroad.	Iron, castings; and car wheels and axles.	Iron, castings; and hot-air furnaces.	Iron, cast; and machinery, engines.	Iron, castings; and machinery.	Iron, castings; and nails and tacks.	Iron, castings; and iron, pigs.	Iron, castings; and iron railing, wrought.	Iron, castings; and iron, rolled and forged.	Iron, castings; and stoves and hollow-ware.	Iron, castings; stoves and machinery.	Lead, bar, and shot.	Leather, tanned; and leather, curried.	Leather, tanned; and patent and curried morocco.	Leather, tanned; and gloves.	Leather, tanned; and glue.	Machinery, cotton and woolen; machinery, engines.	Machinery and iron, rolled.	Machinery, printing-presses, and saws.	Nails and tacks; and iron, bar and nail-plate.	Oysters, packed; and tin, copper, and sheet-iron ware.

†The 1850 columns of this table are an exact reproduction of Table 4 of the Abstract of manufactures at the Seventh Census. [Senate Ex. Doc. No. 39, 2d session 35th Congress.] The table is arithmetically imperfect, and it is not known whether the errors are in the items or total of the table, or in both. The true total line of the items as printed is: Establishments, 123,029; hands employed, total, 958,079; male, 732,157; female, 225,922; capital, $533,245,351; wages, $236,759,464; materials, $555,174,320; products, $1,019,109,616.

TABLE VIII (B.)—THE UNITED STATES—BY INDUSTRIES—1870.

MECHANICAL AND MANUFACTURING INDUSTRIES.	Establishments.	STEAM-ENGINES. Horse-power.	STEAM-ENGINES. Number.	WATER-WHEELS. Horse-power.	WATER-WHEELS. Number.	HANDS EMPLOYED. All.	Males above 16.	Females above 15.	Youth.	CAPITAL. Dollars.	WAGES. Dollars.	MATERIALS. Dollars.	PRODUCTS. Dollars.

* This table is an exact reproduction of Table No. 3 in the Abstract of Manufactures at the Seventh Census, [Senate Executive Document, No. 39, second session Thirty-fifth Congress.] with the exception that the table, as there published, had neither a line of "All Industries" nor a column of "All Hands." It will be seen that the line "All Industries" does not agree with the line "The United States" in Table VIII (A) *ante*, as respects the manufactures of 1850. An attempt, involving much labor, has been made to reconcile the many inconsistencies in the several tables of the "Abstract of Manufactures" at the Seventh Census, but the set, consisting of four tables, has been found to be too erroneous for correction otherwise than by entirely recompiling all the material on the Industrial Schedule of that Census. The discrepancies, though numerous, do not seem to be of sufficient importance to justify an undertaking of this magnitude.

TABLE VIII (B.)—THE UNITED STATES—BY INDUSTRIES—1850—Continued.

MECHANICAL AND MANUFACTURING INDUSTRIES.	Number of establishments.	All hands.	Male hands.	Female hands.	CAPITAL. Dollars.	COST OF LABOR. Dollars.	COST OF RAW MATERIAL. Dollars.	VALUE OF PRODUCTS. Dollars.

TABLE VIII (C).

GENERAL STATISTICS OF MANUFACTURES

FOR

EACH SPECIFIED INDUSTRY,

(BY STATES AND TERRITORIES,)

AT THE CENSUS OF 1870.

REMARKS ON TABLE VIII (C.)

All industries specified in Table VIII (B) for 1870 will be found in the following table, or in the notes at the foot of the pages to which they severally belong, in alphabetical arrangement.

Industries which appear in less than eight States and Territories are omitted from the following Table, and will be found in the notes, with references to Table IX (B) of the States in which such industries are reported.

Industries which are published *in extenso* in the Special Statistics of Manufactures are omitted from this table, and merely a reference made, in the notes, to Table X.

In addition to this, a number of combinations have been effected, by which it is sought to exhibit the production of certain Groups of Industries. Such combinations as are here attempted must, at the best, fall short of theoretical exactness, and in some cases will be found only approximately correct. For example, in dealing with the group of industries producing building-materials, it is wholly impracticable to separate from the manufactures of iron those parts which go to the building of houses, stores, factories, bridges, &c., and the group is, therefore, left incomplete to just this extent. Again, in the group dealing with the preparation of food for man, foreign elements are manifestly included to a small extent, as in the case of provender for horses and cattle, embraced in the productions of grist and flouring mills. Many other such instances might be noted. Still, it is believed that these combinations will be found highly convenient for many of the purposes to which the statistics of production are applied, and that substantial accuracy may be claimed for the results, after the one broad exception has been made as to the completeness of the returns relating to the common trades of carpentering, painting, plastering, and plumbing.

The following list comprises all the Groups of Industries thus formed:

Brass, Cast and Rolled, and Brass-ware, includes: Brass and copper tubing, (which is mainly brass;) Brass founding and finishing; Brass, rolled; and Brass-ware.

Building, (not Marine,) includes: Bridge-building; Carpentering and building; Marble and stone work; Masonry, brick and stone; Painting; Paperhanging; Plastering; and Plumbing and gasfitting.

Building-Materials, includes: Brick; Building-stone, artificial; Cement; Glass, window; Lumber, planed and sawed; Paints and putty; Paints, lead and zinc; Roofing-materials; Sash, doors, and blinds; and Marble and stone quarrying.

Copper, Milled and Smelted, and Wrought, includes: Copper, milled and smelted; Copper, rolled; and Coppersmithing.

Fire-Arms and Ammunition, includes: Ammunition, cartridges, gunpowder, lead shot; Fire-arms; and Gunsmithing

Food and Food Preparations, includes: Bread, crackers, and other bakery products: Butchering; Cheese; Chocolate; Coffee and spices, ground; Fish, cured and packed; Fish and oysters, canned; Flouring and grist mill products; Food preparations, animal; Food preparations, vegetable; Food preparations, vermicelli and macaroni; Fruits and vegetables, canned; Meat, cured and packed; Meat, packed, beef; Meat, packed, pork; Mustard, ground; and Preserves and sauces.

Furniture and House-fixtures, (exclusive of Stoves and Hollow-ware,) includes: Furniture, (not specified;) Chairs; Iron bedsteads; Refrigerators; Looking-glasses; and Looking-glass and picture frames.

Iron and Manufactures of Iron, includes: Iron anchors and cable chains; Iron bolts, nuts, washers, and rivets; Iron, blooms; Iron castings, stoves, heaters, and hollow-ware; Iron, forged and rolled; Iron, pigs; Iron, railing, wrought; Iron pipe, wrought; and Iron ship-building and marine-engines.

Lead, includes: Lead, bar and sheet; Lead, pig; Lead, pipe; and Lead, shot.

Leather, includes: Leather, tanned; Leather, curried; Leather, dressed skins; Leather, morocco, tanned and curried; and Leather, patent and enameled.

Lumber, includes: Lumber, planed; Lumber, sawed; and Lumber, staves, shooks, and headings.

Paper, includes: Paper, (not specified;) Paper, wrapping; Paper, writing; and Paperhangings.

Printing and Publishing, includes: Printing and publishing, (not specified;) Printing and publishing, book; Printing and publishing, newspaper; Printing, job; Maps and atlases; and Photograph albums.

Ship and Boat building and Materials, includes: Boats; Blocks and spars; Iron ship-building and marine-engines; Oakum; Oars; and Ship-building, ship-materials, and repairs.

Textiles, includes: Carpets; Cotton goods; Flax and linen goods; Woolen goods; and Worsted goods.

Tobacco, includes: Tobacco, chewing, smoking, and snuffing; Tobacco and cigars; and Tobacco, cigars.

Wear, Articles of, includes: Boots and shoes; Clothing, men's; Clothing, women's; Clothing, children's; Collars and cuffs, paper; Gloves and mittens; Hats and caps; Hoop-skirts and corsets; and Hosiery.

TABLE VIII (C.)—EACH INDUSTRY BY STATES AND TERRITORIES—1870

[*] ARTIFICIAL LIMBS.

STATES AND TERRITORIES.	Establishments.	STEAM-ENGINES.		WATER-WHEELS.		HANDS EMPLOYED.				CAPITAL.	WAGES.	MATERIALS.	PRODUCTS.
		Horse-power.	Number.	Horse-power.	Number.	All.	Males above 16.	Females above 15.	Youth.	Dollars.	Dollars.	Dollars.	Dollars.
